Chapter 02: Introduction to Healthy Aging

Touhy: Ebersole and Hess' Gerontological Nursing & Healthy Aging, 6th Edition

MULTIPLE CHOICE

1. A man is terminally ill with end-stage prostate cancer. Which statement best describes the nurse's role regarding this man's wellness?
 - a. Providing the client with aggressive medical interventions.
 - b. It is not a real option for this client because he is terminally ill.
 - c. Educating the client that wellness is dependent upon the absence of disease.
 - d. Providing nursing interventions that can help empower a client to achieve his highest level of wellness.

ANS: D

Nursing interventions can help empower a client to achieve a higher level of wellness; a nurse can foster wellness in his/her clients. Wellness is defined by the individual and is multidimensional. It is not just the absence of disease. A wellness perspective is based on the belief that every person has an optimal level of health independent of his/her situation or functional level. Even in the presence of chronic illness or while dying, a movement toward wellness is possible if emphasis of care is placed on the promotion of well-being in a supportive environment.

PTS: 1

DIF: Apply

REF: 20

TOP: Nursing Process: Diagnosis

MSC: Health Promotion and Maintenance

2. In differentiating between health and wellness in health care, which of the following statements is *true*?
 - a. *Health* is a broad term encompassing attitudes and behaviors.
 - b. The concept of illness prevention was never considered by previous generations.
 - c. Wellness and self-actualization develop through learning and growth.
 - d. Wellness is impossible when one's health is compromised.

ANS: A

Health is a broad term that encompasses attitudes and behaviors; holistically, health includes wellness, which involves one's whole being. The concept of illness prevention was never considered by previous generations; throughout history, basic self-care requirements have been recognized. Wellness and self-actualization develop through learning and growth—as basic needs are met, higher level needs can be satisfied in turn, with ever-deepening richness to life. Wellness is impossible when one's health is compromised—even with chronic illness, with multiple disabilities, or in dying, movement toward a higher level of wellness is possible.

3. Which racial/ethnic group has the highest life expectancy in the United States?
 - a. Native Americans
 - b. African Americans
 - c. Hispanic Americans
 - d. Asian/Pacific Island Americans

ANS: C

Hispanic men and women have the highest life expectancy of all. This information makes all the other options incorrect.

PTS: 1 DIF: Understand REF: 15
TOP: Nursing Process: Assessment MSC: Safe, Effective Care Environment

4. Historical influences that have shaped the lives of the majority of the in-between cohort in the United States today include which of the following?
- Influenza epidemic of 1918
 - World War I
 - Child rearing in the Depression
 - World War II

ANS: D

Those who are in the in-between cohort were born between 1920 and 1945. The men were likely to have fought in it. The last of the holocaust survivors are in this group. A person who survived the influenza epidemic would be over 100 years old and therefore would be considered old-old or a centenarian. Most of those who are of the in-between cohort had not reached childbearing age by the end of the Depression. Individuals in the in-between cohort would not have been old enough to fight in WWI.

PTS: 1 DIF: Understand REF: 17
TOP: Nursing Process: Assessment MSC: Safe, Effective Care Environment

5. According to researchers, which characteristic do most centenarians share?
- Female
 - Hispanic
 - Living in rural areas
 - Located in the Midwestern states

ANS: A

Based on the US census report of 2010, centenarians were overwhelmingly white, female, and living in the urban areas of the Southern states.

PTS: 1 DIF: Remember REF: 17
TOP: Nursing Process: Assessment MSC: Safe, Effective Care Environment

6. Which nursing intervention is a holistic approach to an older adult?
- Performs glucose testing during the weekly worship service
 - Wheels ambulatory adults to exercise when running late
 - Basing interventions on the client's functional abilities
 - Allows older adults in a nursing home to eat meals alone

ANS: C

The nurse uses a holistic approach to the care when tailoring care needs to support the client's optimal level of health independent. Interrupting an older adult's worship with glucose testing can be interpreted as a lack of respect for spiritual needs. The nurse can provide for and respect the physical and spiritual aspects of the older adult's life by testing for glucose before the service begins. In transporting ambulatory adults to the exercise program in a wheelchair to save time, the nurse disregards the need for self-esteem and exercise, both important aspects of physical well-being. Ambulatory adults can walk with assistance, if needed, to exercise programs and can benefit from the additional activity and independence. The nurse can be tempted to allow an older adult to eat meals alone in his or her room if this will motivate the person to eat or if the older adult has dysphasia and is embarrassed. However, while focusing on physical needs, the nurse ignores psychosocial and other aspects of health and well-being.

PTS: 1 DIF: Understand REF: 18 TOP: Nursing Process: Evaluation
MSC: Health Promotion and Maintenance

7. An older client who resides in a nursing home has total cholesterol of 245 mg/dL. Which nursing intervention is most likely to assist this client in achieving his highest level of wellness?
- Instruct him about increasing dietary fiber.
 - Ask the health care provider for a low-fat diet.
 - Schedule a consultation for him with the dietitian.
 - Review a menu with him to choose suitable foods.

ANS: D

The nurse collaborates with the older adult to choose suitable foods, which is likely to be an effective nursing intervention to help an older adult with hyperlipidemia achieve optimal health and well-being; it gives the client some control over the regimen and thus engages involvement in the process of lowering serum cholesterol. Informing the older man about dietary fiber offers no control to him because he is not part of the decision. Nursing interventions developed with the older adult's collaboration are most likely to help the older adult achieve health and wellness. Collaborating with the health care provider for a low-fat diet is a reasonable approach to help this client with hyperlipidemia achieve health and wellness. However, the client is more likely to have motivation and enthusiasm for a therapeutic regimen over which he has had some control. Scheduling a consultation with a dietitian is a reasonable approach to an older adult with hyperlipidemia and is a part of a multifaceted approach to optimizing his health. However, the older adult is more likely to engage in a regimen over which he/she has input.

PTS: 1 DIF: Analyze REF: 19 TOP: Nursing Process: Planning
MSC: Health Promotion and Maintenance

8. Which approach requires the nurse to integrate and balance all aspects of an individual's life into the plan of care?
- Holistic nursing
 - Healthy People 2020*
 - Maslow's Hierarchy of Human Needs
 - Orem's Self-Care Requirements

ANS: A

Holistic nursing integrates all aspects of an individual's life into the plan of care by balancing an individual's internal and external environment with psychosocial, spiritual, cultural, and physical processes.

Healthy People 2020, an updated document from 2000 that outlines the goals for achieving health in this country, is a mandate for health care professionals to follow with 467 objectives in 28 focus areas. Maslow's Hierarchy of Human Needs provides a basis for understanding individuals in context and for ranking nursing assessments, diagnoses, goals, and interventions in order of importance. Dorothea Orem's Self-Care Requirements lists human needs, including the need for air, fluids, nutrition, hygiene, elimination, activity, comfort, relief from suffering, and skin integrity. The nurse helps individuals meet these needs to achieve optimal health and wellness.

TOP: Nursing Process: Assessment MSC: Safe, Effective Care Environment

9. The nurse plans activities for older client born between in 1918 and who reside in an assisted-living facility. Which is the best intervention for the nurse to implement?
- a. Have them bake cookies twice a week.
 - b. Conduct interviews for specific interests.
 - c. Arrange dog and cat visits from volunteers.
 - d. Take them to the library for guest speakers.

ANS: B

The nurse conducts individual interviews with the women to determine their interests and to avoid generalizing; as people live longer, they become more and more unique. Because most of these women are in their 80s and 90s, were born between 1920 and 1930, and have generally spent their lives as homemakers, the nurse presumes to know what activities they will enjoy. The nurse avoids arranging group activities until individual interests are determined. In addition, the nurse must assess for allergies and individual fears of animals before exposing an older adult to a pet visit. Unless it is organized on a voluntary basis, the nurse avoids arranging visits by guest speakers. In addition, the nurse will assess each older woman before an outside visit to avoid embarrassing events including incontinence and hearing and vision problems.

10. Which of the following issues in the care of older adults are identified in *Healthy People 2020*?
- a. Delineating nursing staffing levels in long-term care
 - b. Eradicating pressure ulcers in all care settings
 - c. Identifying minimum levels of training for people who care for older adults
 - d. Instituting mandatory training in identification of elder abuse for all caregivers of older adults

ANS: C

Identifying minimum training levels for people who care for older adults is one of the issues identified in *Healthy People 2020*. The rest of the issues are not discussed in *Healthy People 2020*.

PTS: 1 DIF: Remember REF: 19 | Box 2.3 TOP: Teaching and Learning

MSC: Health Promotion and Maintenance

11. If the nurse chooses to define aging as “social aging,” the nurse would consider which of the following aspects?
- The person retired from their job as a police officer.
 - The person takes six different medications multiple times over the course of the day.
 - The person walks with a rolling walker.
 - The person celebrated his 65th birthday.

ANS: A

Social aging is determined by changes in roles. Taking multiple medications multiple times over the course of the day and walking with a rolling walker are functional determinants of aging. Age refers to chronological aging.

TOP: Nursing Process: Assessment

MSC: Health Promotion and Maintenance

12. The holistic health movement has impacted health care in which of the following ways?
- It has focused health care on disease prevention.
 - It has reshaped how health and health care are perceived.
 - It has improved access to health care.
 - It has introduced numerous alternative modalities into health care.

ANS: B

The holistic paradigm has reshaped how health and health care are perceived. Wellness is seen as a state of being which can be defined anywhere along the continuum of health.

MULTIPLE RESPONSE

1. Older adults have been identified as a priority, with a goal to improve their health, function, and quality of life. Identify the targeted chronic focus areas for improvement. (*Select all that apply.*)
- Diabetes
 - Arthritis
 - Congestive heart failure
 - Dementia
 - Cancer
 - Pressure ulcers

ANS: A, B, C, D

In a push toward wellness, older adults were identified as a priority area for the first time. The targeted chronic areas of focus were identified as diabetes, arthritis, congestive heart failure, and dementia.

PTS: 1

DIF: Remember

REF: 17

TOP: Nursing Process: Planning

MSC: Health Promotion and Maintenance

2. Identify the *Healthy People 2020* emerging issues in the health of older adults. (*Select all that apply.*)
- a. Coordinating care for the older adult population
 - b. Assisting older adults in the management of their own care
 - c. Identifying levels of training for those caring for older adults
 - d. Making community resources available for older adults
 - e. Increase in health disparities for rural older adults

ANS: A, B, C

According to United States Department of Health and Human Services (USDHHS): *Healthy People 2020*, emerging issues in the health of older adults are the following: coordinating care; helping older adults manage their own care, establishing quality measures; identifying minimum levels of training for people who care for older adults; and researching and evaluating appropriate training to equip providers with the tools they need to meet the needs of older adults.

3. Researchers hypothesize that most super-centenarians survive and are in good health due to which of the following factors? (*Select all that apply.*)
- a. They have a different genetic makeup than other older adults have.
 - b. They tend to live in wealthier areas of the world.
 - c. The exact cause of this phenomenon is not known.
 - d. Contributing factors to their good health include quality medical care and improved social conditions.
 - e. They have large extended families to assist in their care.

ANS: C, D

The exact cause of super-centenarians' longevity is not known, researchers describe it as due to "rare and unpredictable reasons." Contributing factors include medical care and improved socio-political conditions. There is no known difference in biological or sociological factors between super-centenarians and other older adults. Super-centenarians exist all over the world.

PTS: 1

DIF: Understand

REF: 15

TOP: Nursing Process: Assessment

MSC: Health Promotion and Maintenance

4. The nurse in an assisted living facility (ALF) is preparing a lecture on aging for the residents. The philosophy of the ALF is to approach aging from the viewpoint of health. Based on this philosophy, the nurse includes which of the following topics? (*Select all that apply.*)
- a. "The Many Chronic Illnesses of Aging"
 - b. "Channeling Your Inner Strength Toward Wellness"
 - c. "Maximizing Function As You Age"
 - d. "Conserving Your Strength As You Age"
 - e. "Keep Moving, Maintain Your Mobility"

ANS: B, C, D

A wellness perspective is based on the belief that every person has an optimal level of wellness independent of functional ability. This viewpoint approaches aging with an emphasis on resilience, strength, resources, and capabilities rather than focusing on existing pathological conditions.
