Chapter 02 - The Balance Sheet

125. In performing some due diligence with respect to the work of your new bookkeeper, you notice that a debit posting for prepaid rent of \$900 was mistakenly recorded as a debit to rent expense. Furthermore, a debit to salary expense, which was supposed to be recorded as 754, instead got recorded as \$745. What impact will these two transactions have on debits and credits in trial balance?

The Trial Balance credit balance will be \$9 greater than that of the debit column.

126. In computing the statement of financial position, some data was misplaced and they are attempting to reconstruct the missing data from that which is available. You know that total assets for the current year are \$33,000. Non-current liabilities are \$8,000 and Shareholders equity is \$23,000. The current ratio is 2.50. Find the values for current assets, fixed assets and current liabilities.

\$5000, \$28000, \$2000, respectively. $33000 = CL + 8,000 + 23,000$, therefore $CL = 2,000$. Use the CL value in the current ratio to get CA. $Current\ Ratio = 2.50 = CA / 2,000$, therefore, $CA = 5,000$. Subtract the CA value from total assets to get fixed assets; $33,000 - 5,000 = 28,000$.

Chapter 02 - The Balance Sheet

127. Assume that current assets are greater than current liabilities. What would happen to the current ratio if a company purchased inventory?

It depends. If inventory is purchased using cash, nothing would happen. If it is purchased on credit, CL would increase, as well as CA, and it would cause the current ratio to decrease based on our assumption of $CA > CL$.
