Chapter 2 Analyzing and Recording Transactions

Chapter Opening Critical Thinking Challenge Questions*

Alexandre Bilodeau experienced a huge setback in achieving his goal of winning gold in the 2006 Olympics. In the face of this challenge, he reflected on the experience, set his personal goal and had a daily action plan to achieve it. These same steps can be applied to your life. For instance, you may experience a setback in this accounting course. For instance, you may not perform as well on a homework assignment or exam as you would have liked. Like Alexandre Bilodeau, take a moment to understand why you may have experience this setback, commit to a personal goal and have a detailed action plan to achieve it. This may include reading the chapters before class, setting aside a few hours each day to work on the homework, meeting up with a friend once a week to discuss challenging topics and going to office hours. You can also learn from Alexandre Bilodeau's determination in pursuing your career and in facing challenges in the workplace.

Concept Review Questions

1. Welcome to Lululemon! We are happy to have you as a co-op student. The fundamental steps in the accounting process are those involved in the accounting cycle: Analyze transactions to determine if an economic exchange has taken place and, if so, journalize and post the transaction. An unadjusted trial balance is then prepared to help identify potential adjustments. Appropriate adjusting entries are journalized and posted and an adjusted trial balance is generated from which the financial statements are prepared. Closing entries are then journalized and posted. Finally, a post-closing trial balance is prepared.

The accounting cycle helps Lululemon keep track of its business activities. These business transactions include buying fabric, selling yoga clothing and paying employees. The accounting cycle helps produce financial statements which provide Lululemon the information to make good business decisions.
2. An account receivable is an amount due to a company, but the amount can be increased by the customer (debtor) by making additional purchases. An account receivable is not a single document but represents the result of several written, oral, or implied promises to pay the creditor. A note receivable is a formal document that specifies the fixed amount due to a company on a fixed date or on demand.
3. Four different asset accounts would include any of the following from Spin Master's December 31, 2107 balance sheet: Cash, Trade and other receivables, Inventories, Prepaid expenses, Advances on Royalties, Property, plant and equipment, Intangible Assets, Goodwill or Deferred Tax Assets. Three different liability accounts would include any of the following: Trade Payables and other liabilities, (same as Accounts payable and accrued liabilities), Loans and Borrowings, Deferred Revenue, Provisions, Income Tax Payable and Interest Payable.
4. A debit will decrease and a credit will increase the following accounts: Accounts Payable, Owner's capital and Revenue. Answers will vary, but can include liability (accounts payable, notes payable, unearned revenue and bank loan), owner's capital and revenue accounts.
5. Three debit balance accounts from WestJet's December 31, 2017 balance sheet might include any of the following: Cash and cash equivalents; Marketable securities; Restricted cash; Accounts receivable; Prepaid expenses, deposits and other; Inventory; Property and equipment; Intangible assets; or Other assets. Three credit balance accounts might include any of the following: Accounts payable and accrued liabilities; Advance ticket sales; Deferred rewards program; Non-refundable guest credits; Current portion of maintenance provisions; Current portion of long-term debt; Maintenance provisions; Long-term debt; Other liabilities; Deferred income tax; Share capital; Equity reserves; Hedge reserves; or Retained earnings.

6. When a company sells services or goods, they will exchange their service or good for cash. When the company sells services or goods, they earn revenue. In the account equation, Cash (Asset) increases and Revenue (Equity) increases. If the customer does not pay today, the company records accounts receivable instead of cash. Accounts receivable holds value for the company because it is a promise from the customer to pay in the future. When the customer pays cash, the company no longer has accounts receivable. With the accounting equation, Accounts receivable (Asset) increases and Revenue (Equity) increases.

Account	(1) Type of account	(2) Normal Balance	(3) Financial statement	(4) Time period
Accounts receivable	Asset	Debit	Balance Sheet	A specific point in time
Revenue	Equity	Credit	Income Statement	Period of time

7. Owner's withdrawals are when a business owner takes out money that was earned in the business for personal use. An example is when an owner needs to take out money for a personal vacation. An expense occurs when a cost is needed to run the normal operations of the business. An example is that a business needs to pay its employees for selling clothes at a retail store.

Account	(5) Type of account	(6) Normal Balance	(7) Financial statement
Owner's withdrawals	Equity	Debit	Statement of Changes in Equity
Expense	Equity	Debit	Income Statement

8. Debited accounts are recorded first. The credited accounts are indented.
9. A transaction should first be recorded in a journal to create a complete record of the transaction in one place. Then the transaction is posted to the ledger where entries are summarized by type, i.e., cash, accounts payable, interest expense, etc., to enable analysis by account. This arrangement also means that fewer errors will be made in the accounts.
10. Accounting software is a tool that makes recording accounting transactions easier. You are still the "brain" behind the accounting. You will need to decide when to record a transaction, how to record the transaction, how to interpret the financial statements and what business decisions to make. Knowing how to record accounting manually will help you understand the entire accounting process and what happens behind the software. There are errors in software programs. Over relying on a software program can result in large errors. When you are writing a report using the computer, you still need to know how to write paragraphs and how to explain your content. Just like accounting software, the computer is only a tool.
11. Not preparing a trial balance can cause errors in the financial statements. The trial balance helps to identify and correct errors. If the debits do not equal the credits in the trial balance, this is a clue that errors need to be corrected.

Last revised: September 2018

12. The title of the financial statements must have the 1) company name, 2) the name of the financial statement and 3) the date. Dollar signs are used beside the first number in each column and on the total. Some numbers are indented to show a list of similar numbers in a category. For instance, all expenses are indented. This formatting makes the financial statements easier to read. Indentations do not represent debits and credits. The financial statements do not have debits and credits like the trial balance.

Vahn Landscaping Trial Balance January 31, 2020			
Acct. No.	Account	Debit	Credit
101	Cash.....	\$ 7,000	
163	Equipment.....	9,000	
233	Unearned revenue.....		\$ 2,000
301	Brea Vahn, capital.....		14,000
302	Brea Vahn, withdrawals.....	1,000	
401	Revenue.....		11,000
640	Rent expense	6,000	
690	Utilities expense	4,000	
	Totals.....	<u>\$27,000</u>	<u>\$27,000</u>

Quick Study 2-16

The correct answer is c. If a \$2,250 debit to Rent Expense is incorrectly posted as a credit, the effect is to understate the Rent Expense debit balance by \$4,500. This causes the Debit column total on the trial balance to be \$4,500 less than the Credit column total.

Quick Study 2-17

1. Subtract total debits in the trial balance from total credits
 $24,250 - 21,550 = 2,700$
2. Divide the difference by 9
 $2,700 \div 9 = 300$
3. The quotient equals the difference between the two transposed numbers.
300 is the difference between the two transposed numbers.
4. The number of digits in the quotient tells us the location of the transposition
Look for a difference of 3 between the third number from the right and the fourth number from the right.

Through a process of elimination, the incorrect value is Rent Expense for \$4,100. The correct value must be \$1,400.

Proof: Recalculate the trial balance replacing \$1,400 for the incorrect \$4,100 and the trial balance now balances at \$21,550.

Quick Study 2-18

1. Subtract total debits in the trial balance from total credits

$$728 - 503 = 225$$

2. Divide the difference by 9

$$225 \div 9 = 25$$

The quotient equals the incorrect number.

Through a review of the values in the trial balance, the incorrect value is Notes Payable for \$25. The correct value must be \$250.

Proof: Recalculate the trial balance replacing \$250 for the incorrect \$25 and the trial balance now balances at \$728.

	Services Revenue.....		2,700
	<i>Provided services on credit.</i>		
c.	Cash	3,150	
	Services Revenue.....		3,150
	<i>Provided services for cash.</i>		

Revenues are inflows of assets (or decreases in liabilities) received in exchange for goods or services provided to customers. The other transactions did not create revenues for the following reasons:

- a. This transaction brought in cash, but it was an owner investment in the company.
- d. This transaction brought in cash, but it also created a liability because the services have not yet been provided to the client.
- e. This transaction changed the form of the asset from accounts receivable to cash. Total assets were not increased. Revenue was not generated.
- f. This transaction brought cash into the company and increased assets, but it also increased a liability by the same amount.

Exercise 2-8 (20 minutes)

b.	Salaries Expense.....	1,125	
	Cash		1,125
	<i>Paid the salary of the receptionist.</i>		
d.	Utilities Expense.....	930	
	Cash		930
	<i>Paid the utilities bill for the office.</i>		

Expenses are outflows or using up of assets (or the creation of liabilities) that occur in the process of providing goods or services to customers. The transactions labelled a, c, and e were not expenses for the following reasons:

- a. This transaction decreased assets in settlement of a previously existing liability. Thus, the using up of assets did not reduce equity.
- c. This transaction was the purchase of an asset. The form of the company's assets changed, but total assets did not change, and the equity did not decrease.
- e. This transaction was a distribution of cash to the owner. Even though equity decreased, the decrease did not occur in the process of providing goods or services to customers.

		Manny Gill, capital.....	<u>14,830</u>
		Total liabilities and	
Total assets	<u>\$17,530</u>	equity	<u>\$17,530</u>

Analysis component:

Accounts receivable result from credit sales to customers (debit accounts receivable and credit a revenue). Sales, or revenue, is part of equity. As revenues on account are recorded, assets on the left side of the accounting equation increase and equity on the opposite side of the accounting equation also increases. Therefore, accounts receivable are financed by, or created by, an equity transaction.

Equity

Aaron Paquette, capital 26,200

Total liabilities and equity \$35,400

Analysis component:

Unearned revenue occurs when cash is received from a customer in advance of the work being done. The collection is not recorded as revenue because it has not been earned until the work is done. Unearned revenue is therefore a liability because the business owes the customer a service (or work). For example, WestJet receives cash from customers in advance of the customer actually flying and records it as advance ticket revenue, a type of unearned revenue. These cash collections are recorded as advance ticket revenue, a liability, because the cash doesn't belong to WestJet until they have earned it, which occurs when the customer takes their flight.

	<i>Collected cash from credit customer.</i>				

Analysis component:

All of the details regarding a transaction, such as serial numbers or invoice numbers, form part of the journal entry recorded in the journal and provide a chronological picture of what has happened in the business. The general ledger does not accommodate these kinds of very necessary details. Therefore, we need to journalize to ensure important details are readily available.

The general ledger summarizes by account all of the transactions recorded in the journal. For example, without the ledger, we would not be able to determine the balance in cash without going through the journal and adding/subtracting all of the individual transactions. The ledger allows us to have account balance information.

In summary, although it appears that journalizing and posting are recording the same information twice, the journal and ledger each serve different and important functions in the accounting system.

FOR THE LOVE OF PIXELS
Trial Balance
August 31, 2020

Acct No.	Account Title	Debit	Credit
101	Cash	\$ 14,000	
124	Office supplies	1,800	
131	Prepaid rent	12,000	
167	Photography equipment	42,000	
301	Joseph Eagle, capital		\$62,000
401	Photography revenue.....		9,200
690	Utilities expense	1,400	
	Totals	<u>\$71,200</u>	<u>\$71,200</u>

Analysis component:

The trial balance is not a financial statement; it is an internal working paper used to verify that debits and credits in the general ledger are equal and to review account balances. The trial balance format does not readily communicate information such as financial performance and financial position, information that is desired by external decision makers. Financial statements are used for external reporting because the formats of these communicate information desired by external users. For example, the income statement reports financial performance while the balance sheet reports financial position.

			Ryan Roy, capital	<u>29,000</u>
			Total liabilities and	
Total assets	<u>\$93,300</u>		equity	<u>\$ 93,300</u>

Analysis component:

Losses cause equity to decrease. If equity decreases, either assets have to decrease and/or liabilities must increase to keep the balance sheet in balance. Therefore, if Extreme Hockey's continues to experience losses, there are two short-term alternatives available to prevent a decrease in assets. First, the business could borrow which would increase liabilities and temporarily increase assets until payments had to be made. Second, Ryan Roy, the owner, could invest additional assets into the business which would increase equity and assets. However, for the long-term, the owner does not want to support the business through continual investments; the business must be able to support itself through positive performance (profit).

Exercise 2-21 (20 minutes)

	<i>Description</i>	<i>(1) Difference Between Debit and Credit Columns</i>	<i>(2) Column With the Larger Total</i>	<i>(3) Identify Account(s) Incorrectly Stated</i>	<i>(4) Amount That Account(s) is Overstated or Understated</i>
a.	A \$2,400 debit to Rent Expense was posted as a \$1,590 debit.	\$810	Credit	Rent Expense	Rent Expense is understated by \$810
b.	A \$42,000 debit to Machinery was posted as a debit to Accounts Payable.	\$0	—	Machinery Accounts Payable	Machinery is understated by \$42,000 and Accounts Payable is understated by \$42,000
c.	A \$4,950 credit to Services Revenue was posted as a \$495 credit.	\$4,455	Debit	Services Revenue	Services Revenue is understated by \$4,455
d.	A \$1,440 debit to Store Supplies was not posted at all.	\$1,440	Credit	Store Supplies	Store Supplies is understated by \$1,440
e.	A \$2,250 debit to Prepaid Insurance was posted as a debit to Insurance Expense.	\$0	—	Prepaid Insurance Insurance Expense	Prepaid Insurance is understated by \$2,250 and Insurance Expense is overstated by \$2,250
f.	A \$4,050 credit to Cash was posted twice as two credits to the Cash account.	\$4,050	Credit	Cash	Cash is understated by \$4,050
g.	A \$9,900 debit to the owner's withdrawals account was debited to the owner's capital account.	\$0	—	Owner's Capital Owner's Withdrawals	Owner's Capital account is understated by \$9,900 Owner's Withdrawals is understated by \$9,900

Last revised: July 1, 2018

Exercise 2-22 (15 minutes)

- a. 1. Dr = Cr
2. Accounts Receivable is understated (too low) by \$3,500 and Revenue is understated by \$3,500.
- b. 1. Dr = Cr
2. Accounts Payable is overstated (too high) by \$600 and Cash is overstated by \$600.
- c. 1. Dr ≠ Cr
2. Cash is overstated by \$180.
- d. 1. Dr ≠ Cr
2. Accounts Receivable is overstated by \$750.
- e. 1. Dr = Cr
2. Accounts Payable is understated by \$2,000 and Equipment is understated by \$2,000.

Exercise 2-23 (15 minutes)

Case A:

- 1. Subtract total debits in the trial balance from total credits
 $5,010 - 4,290 = 720$
- 2. Divide the difference by 9
 $720 \div 9 = 80$
- 3. The quotient equals the difference between the two transposed numbers.
80 is the difference between the two transposed numbers.
- 4. The number of digits in the quotient tells us the location of the transposition.
Look for a difference of 8 between the second number from the right and the third number from the right.

Through a process of elimination, the incorrect value is Accounts Payable of \$190. The correct value must be \$910.

Proof: Recalculate the trial balance replacing \$910 for the incorrect \$190 and the trial balance now balances at \$5,010.

Exercise 2-23 (*concluded*)

Case B:

1. Subtract total debits in the trial balance from total credits
 $34,400 - 28,100 = 6,300$
2. Divide the difference by 9 to reveal a slide error
 $6,300 \div 9 = 700$
3. The quotient identifies a slide error and equals the correct value.

Through a process of elimination, the incorrect value is Withdrawals for \$7,000. The correct value must be \$700.

Proof: Recalculate the trial balance replacing \$700 for the incorrect \$7,000 and the trial balance now balances at \$28,100.

Case C:

1. Subtract total debits in the trial balance from total credits
 $942 - 906 = 36$
2. Divide the difference by 9
 $36 \div 9 = 4$
3. The quotient equals the difference between the two transposed numbers.
4 is the difference between the two transposed numbers.
4. The number of digits in the quotient tells us the location of the transposition.
Look for a difference of 4 between the first number from the right and the second number from the right.

Through a process of elimination, the incorrect value is Cash for \$59. The correct value must be \$95.

Proof: Recalculate the trial balance replacing \$95 for the incorrect \$59 and the trial balance now balances at \$942.

	Totals	<u>\$176,230</u>	<u>\$176,230</u>

Analysis component:

Equity represents how much of HR Solutions' assets belong to the owner, Elizabeth Wong. Services Revenue is an equity account because as revenues are realized, the business's net worth (assets – liabilities, or equity) increases either through the receipt of an asset (cash or accounts receivable) or satisfying a liability (unearned revenues). Utilities Expense is an equity account because as expenses are realized, net worth (what belongs to the owner) decreases either through the use of an asset (such as prepaid insurance) or increase in a liability (such as rent payable). Elizabeth Wong, Withdrawals is an equity account because as the owner withdraws assets, Elizabeth Wong's equity in the business (what belongs to the owner) decreases. The owner's objective is for the business to generate sufficient revenues to cover all expenses, provide sufficient assets for the purpose of withdrawals, and at the same time maintain or preferably increase equity (because excess revenues remained after deducting expenses and withdrawals).

**Designer Dry Cleaning
Balance Sheet**

	April 30, 2020	March 31, 2020		April 30, 2020	March 31, 2020
Assets			Liabilities		
Cash.....	\$ 7,000	\$ 3,000	Accounts payable.....	\$ 700	\$ 500
Cleaning supplies	3,500	900	Notes payable	<u>40,000</u>	<u>15,000</u>
Prepaid rent.....	12,000	16,000	Total liabilities	\$40,700	\$15,500
Equipment	<u>76,000</u>	<u>30,000</u>	Equity		
			Christopher Dior, capital.....	<u>57,800²</u>	<u>34,400¹</u>
			Total liabilities and equity	<u>\$98,500</u>	<u>\$49,900</u>
Total assets	<u>\$98,500</u>	<u>\$49,900</u>			

Calculations:

1. $49,900 - 15,500 = 34,400$
2. $98,500 - 40,700 = 57,800$
3. $34,400 + 1,000 - 10,000 = 25,400$
4. $57,800 + 25,100 - 34,400 = 48,500$

Analysis component:

- a. Liabilities increased because of the \$200 increase in accounts payable and the \$25,000 increase in notes payable used, most probably, to finance the purchase of equipment (equipment increased by \$46,000).
- b. Equity increased by a larger amount in March than April because the owner invested \$10,000 during March and nothing during April. Also, during April, the owner made a withdrawal of \$25,100 and only \$1,000 in March. Profit in April was almost twice as much as that reported for March but the large withdrawal and no investments during April caused equity to increase by a smaller amount than in March.

ETHICS CHALLENGE

This problem emphasizes the importance of source documents.

1. There are advantages to the process proposed by the manager. They include improved customer service, less delays, and less work for you. However, you should have serious concerns about the potential for fraud. In particular, there is no control over the possibility of embezzlement by the manager because there are no source documents* being prepared at the time of sale. The manager could steal cash and simply prepare sales receipts to match the remaining cash.

This case involves a conflict between the need for efficiency and the need for control in the form of source documents*. While it makes sense to take and process sales receipts quickly, this efficiency is being accomplished by a shortcut that greatly weakens control over cash receipts. That is, cash could be received and lost because there would be no source documents to verify the sales and cash received.

**Recall from Chapter 1 that source documents identify and describe transactions entering the accounting process and are the source of accounting information, whether in paper or electronic form.*

2. The manager's explanation that the owner does not arrive until 3:00 p.m. suggests that the owner does not know about the proposed shortcut. Thus, the new employee is faced with the dilemma of deciding whether to accept the manager's instructions, to confront the manager with the argument that the shortcut seems wrong, or to ask the owner to confirm the instructions. Each of these alternatives involves personal risk.

Initially, the best thing may be to simply work as instructed for a while in order to get an idea of whether the shortcut is being abused by the manager and perhaps to find out discreetly whether the owner knows about it. The relationship that develops between you and the manager may be of a nature that will allow you to explain your concern and convince the manager that the shortcut should be avoided. Even if the manager is not abusing this shortcut, there are other reasons for doing away with it, such as maintaining accurate records for tax reports and gathering marketing information. Also, the shortcut may result in fraud by other employees who might not be as honest as you and the manager.

If you conclude that the manager is committing fraud, you should report the situation to the owner as quickly as possible.

Analysis component:

Withdrawals are how an owner takes assets out of the business for personal use.

McAllister Surveying realized a \$6,900 profit during the month which caused equity to

Critical Thinking Question

CT 2-1

Note to instructor: Student responses will vary and therefore the answer here is only suggested and not inclusive of all possibilities; it is presented in point form for brevity.

Problem(s):

- information that is available does not provide adequate detail to enable analysis and resulting decision making (from the Western Canadian Sales Division Manager's perspective; from the perspective of the sales and admin staff, the limited detail would make recording information very straightforward/easy since there are only 2 accounts — 1 revenue and 1 expense)

Goal(s)*:

- Sales Division Manager would want to maximize sales, minimize costs, and at the same time accurately record and report with sufficient detail to assist decision making process

Assumption(s)/Principle(s):

- division results have been deteriorating but because of a lack of detail, appropriate questions were not being asked and consequently inappropriate decisions were likely being made
- the disclosure principle (introduced in Chapter 6) requires that appropriate detail be provided and the materiality principle (introduced in Chapter 7) suggests that anything of significance be disclosed/reported

Facts:

- as presented in the sales reports
- by converting the dollars to percentages, we see that from July to September, although profit is increasing in total dollars, expenses are increasing as a percentage of sales causing profit to shrink as a percentage of sales which is unfavourable

Prairie Insurance – Western Canadian Division Sales Report Month Ended						
	Sept. 30, 2020	%	Aug. 31, 2020	%	July 31, 2020	%
Sales revenue	\$680,000	100	\$510,000	100	\$440,000	100
Expenses	544,000	80	382,500	75	321,200	73
Profit	\$136,000	20	\$127,500	25	\$118,800	27

Last revised: July 1, 2018

CT 2-1 (*concluded*)

Conclusion(s)/Consequence(s):

- more revenue and expense accounts are required to provide sufficient detail to allow appropriate monitoring/questions and resulting decisions; this will require a restructuring of the accounting including submission of expense reports which requires resources including expertise

***The goal is highly dependent on “perspective.”**
