There were no other changes in equity during the year and total assets at the end of the year were \$260,000. Trenton Company's debt ratio at the end of the current year is:

- A) 70.6%.
- B) 67.3%.
- C) 32.7%.
- D) 48.6%.
- E) 1.42%.

Answer: B

$\$260,000 = \text{Ending Total Liabilities} + (\text{Beginning Equity} + \text{Revenues} - \text{Expenses} - \text{Dividends})$

$\$260,000 = \text{Ending Total Liabilities} + (\$73,000 + \$93,000 - \$76,000 - \$5,000)$

237) List the steps in processing transactions.

Answer: Business transactions and events are the starting point. Source documents are analyzed for the effects of the transactions and events on the accounting records. The information is recorded into the journal. The information is then posted to the accounts and a trial balance is prepared from the ledger balances. The final step is the preparation of financial statements for decision makers.

Answer: Source documents are the proof that transactions and events have occurred and should be recorded in the accounting records. They provide objective and reliable evidence about transactions and their amounts. Examples of source documents include checks, invoices, sales receipts, credit card statements, and bank statements. They can be in hard copy or electronic form.

241) Explain debits and credits and their role in the accounting system of a business.

Answer: Debit refers to the left side of an account and credit refers to the right side of an account. Debits and credits are part of the double-entry accounting system. This system is based on the concept that all transactions and events affect at least two accounts. The double entry system is organized around the accounting equation which states that  $\text{assets} = \text{liabilities} + \text{equity}$ . Assets, expenses and the dividends account, all have normal debit balances, and liabilities, revenues and the common stock account, all have normal credit balances.

Answer: Information from business transactions and events is recorded in the journal in the form of journal entries. The journal entries include the date, the account titles, and debit and credit amounts. Journal entries may also include a further description of the transaction. During the posting process the debit and credit amounts recorded in the journal are transferred to the individual accounts in the ledger.

244) What is a trial balance? What is its purpose?

Answer: The trial balance is a list of all of the accounts in the ledger with balances at a point in time presented in debit and credit columns according to their balance. The purpose of the trial balance is to summarize the account totals and to verify the accuracy of the total debits and credits. If the total debits and credits are not equal, it indicates an error in the accounting records. However, even if debits do equal credits this is no guarantee that no errors were made in recording and posting transactions.

	Assets	Liabilities
Beginning of the year	\$114,000	\$68,000
End of the year	135,000	73,000

If there were no stockholder investments in the business and no dividends paid during the year, what was the amount of net income earned by Jerry's Butcher Shop?

Answer: Beginning equity = \$114,000 – \$68,000 = \$46,000

Ending equity = \$135,000 – \$73,000 = \$62,000

Increase in equity = \$62,000 – \$46,000 = \$16,000

Cash	\$1,975		
Accounts receivable	2,800

2. An investment of \$500 cash by the sole stockholder was debited to Common Stock and credited to Cash.
3. In computing the balance of the Accounts Receivable account, a debit of \$600 was omitted from the computation.
4. One debit of \$300 to the Dividends account was posted as a credit.
5. Office equipment purchased for \$800 was posted to the Shop Equipment account.
6. One entire entry was not posted to the general ledger. The transaction involved the receipt of \$125 cash for repair services performed for cash.
