66) E

67) The three areas are:

a.Capital budgeting: The identification and management of investment opportunities that are worth more to the firm than they cost to acquire.

b.Capital structure: The determination of the optimal mixture of current and long-term debt and equity used to finance a firm's operations.

c.Working capital management: The daily control over the firm's short-term assets and liabilities.

68) The advantages of the corporate form of organization over sole proprietorships and general partnerships are the ease of transferring ownership, the owners' limited liability for business debts, the ability to raise more capital, and the opportunity of an unlimited life for the business. The key disadvantages are double taxation and higher formation costs.

## **Corporate Finance 13th Edition by Ross CH01**

69) A limited liability company (LLC) limits the liability of each partner for the debts of the partnership to the amount that partner invested in the firm. Under a general partnership, each partner is fully liable for all of the partnership's debts. An LLC avoids the double taxation of profits since the profits are distributed to partners and taxed as personal income. Thus, an LLC is taxed like a partnership while offering the limited liability to owners like a corporation.

70) A sole proprietorship has a limited life, limited access to additional capital, and unlimited liability for the owner. By switching to the corporate form, the sole proprietor can obtain additional capital while reducing his or her potential liability to the amount he or she invested in the firm. Also, the sole proprietor can sell a portion of the business enabling him or her to diversify their holdings while still maintaining majority control if desired. The primary downside of the change is the incurrence of double taxation.

71) The appropriate goal is to maximize the current value of the outstanding stock. This goal focuses on enhancing the returns to the current stockholders who are the owners of the firm. Other goals, such as maximizing sales or earnings, focus too narrowly on accounting profits and ignore the importance of market values in managerial finance.
