Essay

1. Describe two of the three main reasons or theories that describe why government always seems to grow over time.

Ans: (1) As the economy grows, government programs also grow to keep up with increased demand for services, also known as Wagner's Law; (2) government bureaucrats are rewarded for managing larger and more complex departments and therefore seek to grow; and (3) elected officials are rewarded by their constituents with re-election more for bringing home public programs to help their district than for cutting or reducing programs.

Complexity: Difficult

Feedback: Page 23

5. What are the two most common ways to measure the size and growth of government over time?

Ans: The total number of government workers and dollars. Dollars mean the total revenues taken in by government and/or total government expenditures. Revenues and expenditures when comparing change over time or comparing governments with each other and with the private sector are usually shown as a percentage of GDP.

7. Briefly describe the relative sizes of the private and public sectors in the United states; the historical growth of local, state, and federal governments and the reasons for that growth; and the purposes of government expenditures with the sources of revenue used by these three main levels of government.

Ans: The private sector measured in terms of revenues or wealth is larger than the public sector in most countries, with the exception of those countries in which the wealth and the the means of production are owned primarily by the government. However, the national government (the federal government in the case of the U.S.) is typically larger than any single private entity, but many private companies are larger than most U.S. states, and even than many smaller countries. Governments grow for many reasons. The desire of senior managers of large public bureaucracies or large private companies to be in charge of more people and more financial resources is cited as one reason for growth. Other reasons include increasing complexity of societies and their economies causes the public to demand more services from government. International events including wars, economic competition among countries, and prestige may be factors in growth. In the U.S., the federal government in the 18th and early 19th centuries was smaller than state and local government. In the post-World War II period, the federal government generally has grown at a faster rate than state and local government, but there have been periods when the federal government seeks to decentralize responsibilities to state and local governments.
