## Access Tutorial 1: Creating a Database

1. A database or a relational database is a collection of related tables.

- a. True
- b. False

ANSWER: True

POINTS: 1

REFERENCES: AC 4

2. Each record in a table is uniquely identified by a foreign key.

- a. True
- b. False

ANSWER: False

POINTS: 1

REFERENCES: AC 5

3. A software program that lets the user create databases and then manipulate the data in the databases is called a database management system (DBMS).

- a. True
- b. False

ANSWER: True

POINTS: 1

REFERENCES: AC 6

4. A table is a predesigned database that includes professionally designed database objects.

- a. True
- b. False

ANSWER: False

POINTS: 1

REFERENCES: AC 8

5. The only option available for creating tables in Access is to use the datasheet view.

- a. True
- b. False

ANSWER: False

POINTS: 1

REFERENCES: AC 11

6. The number of the currently selected record in a table and the total number of records in the table are displayed in the Current Record box which appears between the two sets of navigation buttons on a datasheet.

- a. True
- b. False

ANSWER: True

9. When creating a form in Access, the Layout view allows the user to make design changes to the form while it is displaying data.

- a. True
- b. False

ANSWER: True

POINTS: 1

REFERENCES: AC 34

10. Compacting a database rearranges the data and objects in a database to decrease its file size.

- a. True
- b. False

ANSWER: True

POINTS: 1

REFERENCES: AC 42

11. A single characteristic or attribute of a person, place, object, event, or idea is a(n) table.

ANSWER: False - field

POINTS: 1

REFERENCES: AC 4

12. A relationship between two tables in a database is formed using a(n) Backstage field. \_\_\_\_\_

ANSWER: False - common

POINTS: 1

REFERENCES: AC 6

13. Each Access database may be as large as two gigabytes in size and may have up to 255 people using the database at the same time. \_\_\_\_\_

78. What are the five primary functions of a Database Management System (DBMS)?

- ANSWER:**
1. A DBMS allows the creation of database structures containing fields, tables, and table relationships.
  2. A DBMS lets users easily add new records, change field values in existing records, and delete records.
  3. A DBMS contains a built-in query language, which lets you obtain immediate answers to the questions (or queries) you ask about your data.
  4. A DBMS contains a built-in report generator, which produces professional-looking, formatted reports from the data.
  5. A DBMS protects databases through security, control, and recovery facilities.

79. Explain the difference between a primary key and a foreign key.

**ANSWER:** The primary key may consist of one or more fields whose values are used to uniquely identify each record in a table.

If the same field used as the primary key in one table is also used as a field in another table, and that field is used to create a relationship between the two tables, that field is called a foreign key in the second table. The foreign key is not used to uniquely identify records in the second table.

### Case 1-1

Lisel is the Student Body President of her college. She is organizing a Fun Run/Walk fund-raising event to benefit the local Children's Hospital. Lisel wants to create an Access database to manage event vendors, the venue, participants, donors, and donations. Before the event takes place, Lisel and the student government representatives must contact vendors and ask for their participation in the event. Also, participants in the event must be registered and issued an entry number.

Three tables are necessary for the database: Vendors, Participants, and Venue. Fields in the Vendors table will include: Vendor Name, Vendor Contact Information, Venue Space Assigned. Fields in the Participants table will include: FirstName, LastName, ParticipantNumber, Donation, and Donors. The Venue table will include: TentNumber and TentSize. Choose the best answer for the questions below.

81. When Lisel created the Participants table for the event participants, she used the Access default primary key field and did not change the name of the field. What field name was used as the primary key in the Participants table?

**ANSWER:** ID - this is the default primary key field for all Access database tables

82. Laquan, another student representative, has the responsibility of contacting the vendors for the event and assigning tent spaces to them. He needs to view data that uses fields from both the Vendor table and the Venue table. Which database tool would create the most concise list of vendors, vendor contact information, and assigned tent spaces: a query, a table, or a form?

**ANSWER:** A query will provide the most concise list combining fields from the Vendor table and the Venue table.
