## **Chapter 2: Understanding and Treating Mental Disorders**

1. What term is used to describe the cause of a disorder?

#### MULTIPLE CHOICE

	<ul><li>a. genesis</li><li>b. etiology</li><li>c. psychiatric underpinnings</li><li>d. psychological underpinnings</li></ul>
	ANS: B REF: Introduction OBJ: UABB.SUES.17.2.1 Identify and describe the models of psychopathology that have been used to explain abnormal behavior. KEY: Bloom's: Understand
2.	A psychologist who uses the words <i>neurological makeup</i> when discussing disorders is most likely using which model?
	<ul><li>a. social</li><li>b. psychological</li><li>c. sociocultural</li><li>d. biological</li></ul>
	ANS: D REF: One-Dimensional Models of Mental Disorders OBJ: UABB.SUES.17.2.1 Identify and describe the models of psychopathology that have been used to explain abnormal behavior. KEY: Bloom's: Analyze
3.	Models are often utilized by scientists to  a. provide a clear and definitive explanation for a phenomenon  b. describe or explain a phenomenon they cannot directly observe  c. directly observe a phenomenon with unobservable causes  d. infer a phenomenon from something more abstract
	ANS: B REF: One-Dimensional Models of Mental Disorders OBJ: UABB.SUES.17.2.1 Identify and describe the models of psychopathology that have been used to explain abnormal behavior. KEY: Bloom's: Analyze
4.	An assumption of the multipath model of abnormality is that  a. the biological perspective best explains the complexities of human behavior  b. most psychological disorders are due to one or two primary factors  c. biological, psychological and social factors contribute equally to most disorders  d. different individuals exposed to different factors may develop similar mental disorders
	ANS: D REF: A Multipath Model of Mental Disorders OBJ: UABB.SUES.17.2.2 Describe the multipath model of mental disorders. KEY: Bloom's: Understand
5.	Which factor is a biological explanation of psychopathology?  a. family interactions  b. neurological dysfunctions  c. early childhood experiences d. behaviors learned in the environment
	ANS: B REF: One-Dimensional Models of Mental Disorders OBJ: UABB.SUES.17.2.1 Identify and describe the models of psychopathology that have been used to explain abnormal behavior. KEY: Bloom's: Understand
6.	Forebrain is to as hindbrain is to  a. alertness and attention; language, thought, and memory b. serotonin-based systems; dopamine-based systems

	<ul><li>c. higher mental functions; basic bodily functions and instincts</li><li>d. visual and spatial abilities; emotions and motivation</li></ul>
	ANS: C REF: Dimension One: Biological Factors OBJ: UABB.SUES.17.2.3 Describe how mental disorders can be explained through our biological makeup. KEY: Bloom's: Understand
7.	The function of neural dendrites is to  a. release neurotransmitters  b. receive signals from other neurons  c. bind to receptors of other neurons  d. trigger synaptic excitation of other neurons
	ANS: B REF: Dimension One: Biological Factors OBJ: UABB.SUES.17.2.3 Describe how mental disorders can be explained through our biological makeup. KEY: Bloom's: Understand
8.	<ul> <li>Which statement about neurotransmitters is <i>accurate</i>?</li> <li>a. Neurotransmitters are released by dendrites and reabsorbed by the neuron body.</li> <li>b. Abnormal neurotransmitter levels may be associated with symptoms of mental disorders.</li> <li>c. Neurotransmitters have only excitatory effects on the human nervous system.</li> <li>d. Neurotransmitters send neural impulses to the axons of receiving neurons.</li> </ul>
	ANS: B REF: Dimension One: Biological Factors OBJ: UABB.SUES.17.2.3 Describe how mental disorders can be explained through our biological makeup. KEY: Bloom's: Understand
9.	Dopamine is related to several mental disorders, including a. anxiety and depression b. Parkinson's disease and schizophrenia c. obsessive-compulsive disorder and Parkinson's disease d. schizophrenia and depression
	ANS: B REF: Dimension One: Biological Factors OBJ: UABB.SUES.17.2.3 Describe how mental disorders can be explained through our biological makeup. KEY: Bloom's: Analyze
10.	Because Joan suffers from depression, Dr. Adler has prescribed a medication that alters the reuptake of and increases its availability in her brain. For Justin, who suffers from anxiety, Dr. Adler prescribes a drug that affects receptor reactivity to  a. serotonin; GABA
	ANS: A REF: Dimension One: Biological Factors OBJ: UABB.SUES.17.2.3 Describe how mental disorders can be explained through our biological makeup. KEY: Bloom's: Apply
11.	A person's observable physical or behavioral characteristics are the  a. same thing as their genotype
	ANS: D REF: Dimension One: Biological Factors OBJ: UABB.SUES.17.2.3 Describe how mental disorders can be explained through our biological

	makeup.	KEY: Bloom's: Understa	and	
12.	<ul><li>a. It has helped find</li><li>b. It has received su</li><li>c. It has identified by</li></ul>	out the biological model is a deffective drugs for treating apport from diathesis-stress brain abnormalities for most t inheritance is the direct con	ig di s the st m	isorders. eory. ental disorders.
	ANS: A OBJ: UABB.SUES makeup.	REF: Dimension One: E .17.2.3 Describe how ment KEY: Bloom's: Analyze		ogical Factors lisorders can be explained through our biological
13.	The scientific field that a. psychopharmace b. pharmaceuticals		c.	on the mind and behavior is called psychopharmacology pharmacology
	ANS: C OBJ: UABB.SUES makeup.	REF: Dimension One: F .17.2.3 Describe how ment KEY: Bloom's: Understa	tal d	ogical Factors lisorders can be explained through our biological
14.	<ul><li>a. disorders result f</li><li>b. the causes of diso</li><li>c. diathesis is a pred</li></ul>	rom childhood experiences orders are largely consciou disposition to illness and st	s and s ar	namic model are that  d anxieties operate unconsciously  d culture determines the symptoms  s is an environmental trigger for illness  ations and symptoms start with biology
	ANS: A OBJ: UABB.SUES mental disorders.		logi	chological Factors ical models that are used to explain the etiology of
15.	Which drug is most la. a benzodiazepine b. chlorpromazine		c.	tient suffering from depression? a selective serotonin reuptake inhibitor lithium
	ANS: C OBJ: UABB.SUES makeup.	REF: Dimension One: E .17.2.3 Describe how ment KEY: Bloom's: Understa	tal d	ogical Factors lisorders can be explained through our biological
16.				When she has to make a decision, she often creates ychodynamic point of view, Leesa is relying most
	<ul><li>a. ego</li><li>b. id</li></ul>			superego subconscious
	ANS: A OBJ: UABB.SUES mental disorders.	REF: Dimension Two: l .17.2.4 Discuss the psycho KEY: Bloom's: Apply		chological Factors ical models that are used to explain the etiology of
17.	been severely disrupt	ted. In order to feed herself he does. According to Freu	fano	orn country in which for years, the economy has d her children, she steals food, but she feels a great the personality structure involved in the guilt she
	a. ego		c.	
	b. superego		u.	subconsciousness

	ANS: B REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply
18.	Jason exploits other people and never feels guilty about it. He rarely helps other people and feels no pride when he does. According to psychodynamic thinking, Jason has an underdeveloped  a. superego  c. subconscious  b. ego  d. id
	ANS: A REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply
19.	According to Freud, the two <i>most</i> important instincts in people are  a. pleasure and reality c. sex and aggression b. responsibility and irresponsibility d. fear and happiness
	ANS: C REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Understand
20.	Dr. Young says, "My client faced such severe traumas in her first five years of life that she blocked the memories from conscious recall. The result is that although she is 29 years old, and cannot remember her childhood." Dr. Young is describing the psychodynamic concept of  a. reaction formation
	ANS: D REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply
21.	According to the psychodynamic model, people use unconscious strategies to protect their egos from anxieties. The general term for these strategies is  a. defense mechanisms
	ANS: A REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Understand
22.	Constance was instructed by her therapist to say whatever came to mind, even if it was illogical or embarrassing. Her therapist was using which psychodynamic technique?  a. dream analysis  c. resistance  b. free association  d. catharsis
	ANS: B REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply
23.	After three sessions, Molly decides she is madly in love with Dr. Arnold. As a psychoanalyst, Dr. Arnold will most likely  a. ignore these feelings and continue with therapy

	<ul> <li>b. see this as a sign of other relationship issues in Molly's life</li> <li>c. encourage her feelings as a way to help her feel secure in her relationships</li> <li>d. correct her mistaken impression and discontinue therapy</li> </ul>
	ANS: B REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply
24.	Dr. Al-Suwaidi explains his clients' psychological problems by considering biological, psychological, social, and sociocultural explanations. He is using what the text refers to as the model.  a. multipath
	ANS: A REF: A Multipath Model of Mental Disorders OBJ: UABB.SUES.17.2.2 Describe the multipath model of mental disorders. KEY: Bloom's: Apply
25.	According to psychodynamic therapists, defense mechanisms  a. operate consciously
	ANS: B REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Analyze
26.	Which model of psychopathology considers unconscious influences to be the motivation for behavior?  a. existential c. cognitive b. psychodynamic d. humanistic
	ANS: B REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Understand
27.	Unlike traditional psychoanalysts, post-Freudians tend to  a. deemphasize instinctual drives as the cause of behavior  b. view all behavior as originating predominantly from conscious thought  c. deemphasize the importance of personal choice and future goals  d. feel that talking in therapy is a waste of time
	ANS: A REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Analyze
28.Wł	a. It rejects the importance of childhood experience as a cause of adult disorder. b. It is a cognitive approach used to understand family dynamics. c. It involves exploration of past interpersonal relationships. d. It employs a humanistic-existential set of concepts.
	ANS: C REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Analyze

- 29. Of the following, which client would be *most* likely to benefit from psychoanalysis?
  - a. a poor person with limited verbal skills
- c. a rich anxious young woman
- b. an older woman in immediate crisis
- d. a psychotic older man

ANS: C REF: Dimension Two: Psychological Factors

OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Analyze

- 30. Dr. O'Brien says, "Psychodynamic theory has had a significant impact on psychology because it is based largely on observations in controlled conditions. Further, the theory emphasizes freedom of choice, and the therapy is effective with all disorders." Which part of Dr. O'Brien's statement is accurate?
  - a. Psychodynamic therapy is effective with all disorders.
  - b. Psychoanalysis has had a significant impact on psychology.
  - c. Psychodynamic theory is based on observations in controlled conditions.
  - d. Psychodynamic theory emphasizes freedom of choice.

ANS: B REF: Dimension Two: Psychological Factors

OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply

- 31. Psychodynamic theory \_\_\_\_\_
  - a. is often considered to be the first gynocentric theory
  - b. used advanced research methodology for Freud's time
  - c. can be applied to a wide range of disorders including schizophrenia
  - d. helps clients resolve childhood conflicts that affect current relationships

ANS: D REF: Dimension Two: Psychological Factors

OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Analyze

32. A psychologist who sees a client's problems as caused by a lack of useful, productive behaviors and lack of consequences following inappropriate actions probably supports which model of psychopathology?

a. existential

c. behavioral

b. psychodynamic

d. humanistic

ANS: C REF: Dimension Two: Psychological Factors

OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Analyze

33. Dr. White says, "Psychopathology is learned through a person's interactions with his or her environment." Dr. White's statement reflects which psychological model?

a. behavioral

c. cognitive

b. psychodynamic

d. biological

ANS: A REF: Dimension Two: Psychological Factors

OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply

- 34. Classical conditioning is a form of associative learning. What exactly is associated?
  - a. internal models of the world and behavior
  - b. a neutral stimulus and an unconditioned stimulus

c. a behavior and its consequence

	d. unconscious motivations and internal need	s	
	ANS: B REF: Dimension Two: OBJ: UABB.SUES.17.2.4 Discuss the psychomental disorders. KEY: Bloom's: Analyze	ological models that are used to explain the etiology of	of
35.	If a loud siren is sounded, any newborn infant terminology, the siren is a(n) a. conditioned response	will automatically scream. In classical conditioning c. unconditioned stimulus	
	b. unconditioned response	d. conditioned stimulus	
	ANS: C REF: Dimension Two: OBJ: UABB.SUES.17.2.4 Discuss the psychomental disorders. KEY: Bloom's: Analyze	ological models that are used to explain the etiology of	of
36.	Which statement about classical conditioning is a. It was first described by Edward Thorndik b. It assumes that behavior is entirely volition c. It can successfully explain most human be d. It was discovered by Ivan Pavlov when he	e after observing the behavior of cats.  nal and controlled by its consequences.  havior, including instincts and reflexes.	
	ANS: D REF: Dimension Two: OBJ: UABB.SUES.17.2.4 Discuss the psychomental disorders. KEY: Bloom's: Analyze	ological models that are used to explain the etiology of	of
37.	In his original experiments, Pavlov paired a be bell tone alone could provoke salivation. When a. bell had become a conditioned stimulus b. food had become a conditioned stimulus c. animal had lost interest in the food d. salivation had become an unconditioned re	•	ne
	ANS: A REF: Dimension Two: OBJ: UABB.SUES.17.2.4 Discuss the psychomental disorders. KEY: Bloom's: Underst	ological models that are used to explain the etiology of	of
38.	Which statement about classical conditioning is a. The conditioned response the automatic reb. Classical conditioning does not occur unlec. A reliable pairing of the UCS and the UCF d. Classical conditioning involves involuntary	sponse to the UCS. ss the stimuli are reinforced. R leads to learning.	
	ANS: D REF: Dimension Two: OBJ: UABB.SUES.17.2.4 Discuss the psychomental disorders. KEY: Bloom's: Analyze	ological models that are used to explain the etiology of	of
39.	Watson and Rayner's famous research in classidevelopment of		
	<ul><li>a. cognitive disorders</li><li>b. neuroses</li></ul>	<ul><li>c. phobias</li><li>d. depression</li></ul>	
	ANS: C REF: Dimension Two:	Psychological Factors	

	OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Understand
40.	Classical conditioning has been useful in the field of abnormal psychology primarily by  a. explaining the acquisition of phobias and other human behaviors  b. emphasizing the voluntary nature of most human behavior  c. exploring how abnormal behavior is learned through observation  d. demonstrating the importance of the consequences of behavior
	ANS: A REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Understand
41.	Erin has an exaggerated fear of flying. She refuses to board an airplane and avoids airports altogether.  A behavioral therapist would be most likely to use in treating her fear  a. cognitive restructuring
	ANS: B REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply
42.	Unlike behaviors in classical conditioning, operant behaviors are a. learned by observing others c. voluntary and controllable b. unconscious d. instinctive
	ANS: C REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Understand
43.	Patty knows that if she cries, she will get her way. Paul knows that if he cries, he will be ignored. Which model of behavior suggests that Patty will increase her crying and Paul will decrease his crying?
	<ul><li>a. classical conditioning</li><li>b. operant conditioning</li><li>c. psychodynamic theory</li><li>d. observational learning</li></ul>
	ANS: B REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply
44.	<ul> <li>Which quote is <i>most</i> similar to the theory of operant conditioning?</li> <li>a. "Emotions are a function of beliefs, not events."</li> <li>b. "Emotions are the outgrowth of passive associations."</li> <li>c. "Most of our behavior is motivated by unconscious factors."</li> <li>d. "We do more of whatever behavior pays off."</li> </ul>
	ANS: D REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Analyze
45.	Which scenario <i>best</i> illustrates operant conditioning?

a. A man gets sick when he smells the same kind of food that caused him food poisoning.

	<ul><li>b. A man asks for a raise because, in the past, his requests have been successful.</li><li>c. A woman has been frightened by thunderstorms all her life and her fears are getting worse.</li><li>d. A child watches a friend steal from a store, so he thinks he might steal in the future.</li></ul>
	ANS: B REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Analyze
46.	In classical conditioning, behaviors are controlled by events that the response, whereas in operant conditioning, they are controlled by events that the response.  a. intensify; reduce
	ANS: C REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Analyze
47.	From an operant conditioning point of view, self-injurious behavior may be learned through the use of
	a. reinforcement c. implosion b. personalization d. modeling
	ANS: A REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Understand
48.	A kindergarten teacher wants to reduce the amount of aggressiveness children display in her class and on the playground. Using operant conditioning principles, the teacher should  a. use negative reinforcers to decrease the behavior  b. pair aggressiveness with some pleasant stimulus  c. eliminate the reinforcement associated with aggressiveness  d. encourage the children to get the aggressiveness out of their systems
	ANS: C REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply
49.	Which technique increases the frequency of a behavior because it removes or reduces an aversive (punishing) event?  a. positive reinforcement b. vicarious conditioning c. negative reinforcement d. modeling
	ANS: C REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Understand
50.	When Stanley is afraid of meeting a woman, he finds an excuse to run off by himself. The immediate effect of running away is to make him feel less anxious and more at ease. Stanley's behavior illustrates the  a. role of negative reinforcers in avoidance behavior b. fact that shaping can result in maladjusted behavior c. role of partial reinforcement in abnormal behavior d. power of positive reinforcement

	OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply
51.	Unlike operant or classical conditioning, in observational learning,  a. direct reinforcement is necessary to establish behavior  b. new behaviors can be learned solely by watching others  c. reinforcement must precede the person's action  d. reinforcers are not necessary to maintain a behavior
	ANS: B REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Understand
52.	One strength of the behavioral model is that it  a. emphasizes the impact of environment on behavior  b. is applied to explain intrapsychic conflict  c. is not restricted by adherence to scientific methodology  d. highlights the subjective life of the individual
	ANS: A REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Analyze
53.	When John was growing up, he saw his older brother severely beaten by their father after the brother was caught drinking a beer. Since then, John has never had a beer in his life. What form of learning does this <i>best</i> illustrate?  a. classical conditioning  b. instrumental learning  c. observational learning  d. operant conditioning
	ANS: C REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply
54.	Dr. Ansorg believes that her clients can acquire appropriate social skills by watching her interact with other people in a social setting. Dr. Ansorg assumes which paradigm of learning?  a. classical conditioning b. observational learning c. operant conditioning d. psychodynamic  ANS: B  REF: Dimension Two: Psychological Factors
	OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply
55.	Mykael's therapist says: "Your interpretation of the events in your life brings on your behaviors. If you can see yourself as less of a failure and more of a success, your behaviors will change." The therapist probably supports which approach to abnormal behavior?  a. cognitive-behavioral  b. operant conditioning  c. psychodynamic d. family systems
	ANS: A REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply

56.	The term <i>irrational thoughts</i> plays an important role in which model of psychopathology?  a. family systems  c. cognitive-behavioral  b. behavioral  d. multicultural
	ANS: C REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Understand
57.	Cognitive-behavioral theorists emphasize that disturbed individuals  a. come from disturbed families  b. live in stressful environments  c. have irrational and maladaptive thoughts  d. are deficient in interpersonal skills
	ANS: C REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Understand
58.	Who developed the REBT theory of personality and irrational beliefs?  a. Ellis  c. Beck  b. Minuchin  d. Satir
	ANS: A REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Understand
59.	Dr. Alcott makes the following statement about Janet's depression: "Your depression may be due to your misperception of this unfortunate situation and your tendency to blame yourself for events that are beyond your control. What we need to do is help you to recognize and modify your irrational beliefs." Dr. Alcott's comments are characteristic of the  a. behavioral model
	ANS: B REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply
60.	<ul> <li>Dr. Danvers is a firm believer in Ellis's REBT theory. Given that, what can we expect Dr. Danvers to say?</li> <li>a. "People are less troubled by their thoughts regarding the events in their lives than the actual events themselves."</li> <li>b. "Belief that an event is unfortunate leads to a healthier consequence than belief that an event is a catastrophe."</li> <li>c. "Our reactions are due to our learned associations and there is little we can do about them."</li> <li>d. "Depression is something you are most likely born with and can never really escape."</li> </ul>
	ANS: B REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply

61.	<ul> <li>Dr. Weinberg is a humanistically-oriented psychotherapist. Which comment about cognitive therapy is she <i>most</i> likely to make?</li> <li>a. "People have the ability to make free choices and they are responsible for their own decisions."</li> <li>b. "Therapists who use the ABC-theory are too passive; they should be more like teachers than listeners."</li> <li>c. "Cognitive therapists put too much emphasis on childhood experiences and not enough on choices one makes in life."</li> <li>d. "Thoughts are not observable, so they have no place in science, which should only focus on behavior."</li> <li>ANS: A REF: Dimension Two: Psychological Factors</li> <li>OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of</li> </ul>
	mental disorders. KEY: Bloom's: Apply
62.	Dr. Abdul explains to his students, "There are two key things to understand about this therapeutic approach. First, the best way to understand an individual's behavior is to see the world from that person's point of view. Second, people are able to make free choices in life." Which theoretical approach is Dr. Abdul discussing?  a. psychodynamic  c. cognitive  b. humanistic  d. behavioral
	ANS: B REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply
63.	A major contribution of the humanistic perspective is its  a. insistence on rigorous empirical studies  b. primary focus on persons with serious disorders  c. positive view of the individual  d. emphasis on blocked instinctual forces
	ANS: C REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Understand
64.	Shelly says, "I think that everyone has an inherent tendency to strive toward their full potential. It shows in our creativity and delight in discovering new things." Shelly's thoughts illustrate  a. Maslow's term "self-actualization"  b. Thorndike's principle "the law of effect"  c. Freud's view of unconscious influences on our development

- d. Ellis's concept of rational beliefs

REF: Dimension Two: Psychological Factors ANS: A

OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply

- 65. A mother says to her daughter, "I value you regardless of your behavior. I may disapprove of what you do, but I will still respect and love you." According to Rogers, this mother is \_\_\_\_\_.
  - a. increasing the incongruence in the child's self-concept
  - b. expressing conditions of worth toward her daughter
  - c. providing unconditional positive regard
  - d. teaching the girl irrational beliefs

	ANS: C REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Apply
66.	According to Rogers, which aspect of a therapeutic relationship is most important?  a. well-developed counseling techniques c. the therapist's attitude b. interpretation of transference d. insight into the client's problems
	ANS: C REF: Dimension Two: Psychological Factors OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of mental disorders. KEY: Bloom's: Understand
67.	As a person-centered therapist, Dr. Finn wants his clients to discover their strengths and their full potential. As a result, Dr. Finn will most likely  a. provide unconditional positive regard and empathy to the client  b. make suggestions for ways his clients can increase their strength and potential  c. point out how his clients get in the way of developing their strength and potential  d. reinforce the behaviors his clients use that promote their strength and potential

#### **ESSAY**

1. Compare and contrast the psychodynamic model and the humanistic model on the following issues: the origins of abnormal behavior, the role of conscious experience in everyday behavior, determinism, and methods of treatment.

#### ANS:

Psychoanalytic thinkers see early childhood experiences as critical for all mental disorders. Traumatic experiences during the first three psychosexual stages can fixate the individual at that stage, arresting emotional development and leading to characteristic symptoms. These experiences are often out of the person's awareness, and unconscious impulses can threaten to overwhelm ego controls. Defenses against these sources of anxiety both protect the person and, if used excessively, generate psychological and physical symptoms. Humanistic thinkers also see childhood as influential. Specifically, Rogers claimed that the natural tendency to live up to one's potential (the actualizing tendency) can be thwarted when parents and others place conditions on their expression of love for the child. Incongruence between the individual's way of seeing himself or herself and actual experience is the core reason for mental disorders. Psychoanalysts place much greater emphasis on the unconscious than do other theorists. They see conscious experience as often being a distortion of underlying, truer feelings and impulses. Humanistic theorists believe that people are more capable of making conscious choices that are in their own best interests. They also place great importance on knowing the subjective reality of the client.

Because early and unconscious experiences drive behavior, psychoanalysts are inclined to see current behavior as determined by history and forces out of the individual's control. Humanists disagree and claim that we have the freedom to make choices and that we also must take responsibility for those choices.

These differences lead naturally to differences in treatment strategies. Psychoanalytic therapy seeks to make the unconscious conscious by using dream analysis, free association, and other techniques including projective tests. Humanistic therapists provide clients with unconditional positive regard—a supportive environment in which they can fully experience feelings and thoughts. Rogers's person-centered therapy is nondirective and uses reflection of feeling to help clients solve their own dilemmas.

REF: Dimension Two: Psychological Factors

OBJ: UABB.SUES.17.2.4 Discuss the psychological models that are used to explain the etiology of

mental disorders. KEY: Bloom's: Apply

2. Briefly describe the biological model of psychopathology. Be sure to include a discussion of brain structure and communication among brain structures and the role each may play in the development of psychological problems.

#### ANS:

According to the biological model, abnormal behavior is the result of biological or physical factors. More specifically, this model suggests that abnormal behavior may be due to problems with brain structure or functioning, neurotransmitter or hormonal imbalances, or inherited factors.

The brain can be divided into three main sections: the forebrain, the midbrain, and the hindbrain. The forebrain is comprised of the thalamus, the hypothalamus, reticular activating, system, limbic system, and cerebrum. The thalamus is necessary for the relaying of information between other regions of the central nervous system and the cerebral cortex. The hypothalamus regulates hunger, thirst, and body temperature. The limbic system is involved in experiencing and expressing emotions and motivations. The cerebrum includes the cerebral cortex and covers the midbrain and thalamus. The midbrain coordinates information between the forebrain and the hindbrain, and it is involved in vision and hearing. Along with the hindbrain, the midbrain controls sleep, alertness, and pain. The hindbrain manufactures serotonin and controls functions such as sleep, heart rate, and respiration. A network of nerve fibers in the hindbrain that threads into the midbrain called the reticular formation controls bodily states such as sleep, alertness, and attention. Any type of abnormalities in these structures, due to injury, birth complications, excessive intake of alcohol or drugs, or prenatal exposure to toxins, can result in direct physical and/or psychological problems.

Messages are communicated from one area of the brain to another via neurotransmitters. More specifically, a message in the form of an electrical impulse moves through a neuron until, when it reaches the end of the axon, it triggers the neuron to release chemicals called neurotransmitters into the synaptic cleft. These neurotransmitters are taken up by the next neuron, transformed into a new electrical impulse, and carried through that cell body. This process of neurotransmission can go awry in several ways. There may be too much or too little of the neurotransmitter substance, there may be too many or too few receptors for the amount of neurotransmitter released, there may be other neurons present that might inhibit the neural connections, and there may be problems with the interrelationships among different neurotransmitter substances. All these problems may lead to psychopathology.

REF: Dimension One: Biological Factors

OBJ: UABB.SUES.17.2.3 Describe how mental disorders can be explained through our biological

makeup.

KEY: Bloom's: Apply

3. Imagine that a client from a non-European family comes to a psychological clinic for help. How would therapists endorsing a family systems approach see the person's problems differently than a multicultural psychologist? How might they see them similarly?

#### ANS:

A family systems theorist will see the individual's behavior as stemming from a family context. This person's problems will be seen as being affected by the family and, in turn, affecting other family members. The individual's behavior may be a symptom of unhealthy family dynamics. Three approaches to family therapy might be taken: communications, strategic, and structural. The communications approach to treatment would look at how the client and family convey messages. The strategic approach would emphasize power relationships among family members. The structural approach would investigate the degree to which there are over- or under-involved relationships among family members.

The multicultural theorist would emphasize the cultural norms of the client's background. For example, if the family is Asian, the degree of collectivity versus independence would be highlighted. It would be important to accept the legitimacy of the client's culture and examine whether discrimination by the majority culture contributes to the individual's distress.

Both models would focus more on the individual's larger context (family or society) than would other models. The problems of the individual would be reevaluated as problems that occur in larger groups.
