Correct Answer : direct investment

97 : _____ is the set of values, beliefs, behaviors, customs, and attitudes that helps the organizations members understand what it stands for, how it does things, and what it considers important.

Correct Answer : Organizational cultural

ESSAY

98 : Define the internal environment of an organization, and describe its four major elements.

Correct Answer : An organization's internal environment consists of conditions and forces within the organization. It consists of an organization's owners, board of directors, employees, and physical work environment.

?Owners: The owners of a business are, of course, the people who have legal property rights to that business. Owners can be a single individual who establishes and runs a small business, partners who jointly own the business, individual investors who buy stock in a corporation, or other organizations.

?Board of Directors: A corporate board of directors is a governing body that is elected by the stockholders and charged with overseeing a firm's general management to ensure that it is run to best serve the stockholders' interests. Some boards are relatively passive: They perform a general oversight function but seldom get actively involved in how the company is really run. But this trend is changing as more and more boards carefully scrutinize the firms they oversee and exert more influence over how they are being managed.

?Employees: An organization's employees are also a major element of its internal environment. Of particular interest to managers today is the changing nature of the workforce, which is becoming increasingly more diverse in terms of gender, ethnicity, age, and other dimensions. Workers are also calling for more job ownership—either partial ownership in the company or at least more say in how they perform their jobs. Another trend in many firms is increased reliance on temporary workers—individuals hired for short periods of time with no expectation of permanent employment.

?Physical Work Environment: A final part of the internal environment is the organization's actual physical environment and the work that people do. Some firms have their facilities in downtown skyscrapers, usually spread across several floors. Others locate in suburban or rural settings and may have facilities more closely resembling a college campus. Some facilities have long halls lined with traditional offices. Others have modular cubicles with partial walls and no doors.

99 : Discuss the arguments for and against social responsibility on the part of organizations.

Correct Answer : People who argue in favor of social responsibility claim that—because organizations create many of the problems that need to be addressed, such as air and water pollution and resource depletion—organizations should play a major role in solving them. They also argue that, because corporations are legally defined entities with most of the same

privileges as private citizens, businesses should not try to avoid their obligations as citizens. Advocates of social responsibility point out that, whereas governmental organizations have stretched their budgets to the limit, many large businesses often have surplus revenues that could be used to help solve social problems. Some people argue that widening the interpretation of social responsibility will undermine the U.S. economy by detracting from the basic mission of business: to earn profits for owners. Another objection to increasing the social responsibility of businesses reflects the position that corporations already wield enormous power and that involvement in social programs gives them even more power. Still another argument against social responsibility focuses on the potential for conflicts of interest. Finally, critics argue that organizations lack the expertise to understand how to assess and make decisions about worthy social programs. How can a company truly know which cause or program is most deserving of its support or how money might best be spent?

100 : What is organizational culture? Discuss the importance, determinants, and management of organization culture.

Correct Answer : Organizational culture is the set of values, beliefs, behaviors, customs, and attitudes that helps the organization's members understand what it stands for, how it does things, and what it considers important. The Importance of Organizational Culture: Culture determines the organization's "feel." A strong and clear culture can play an important role in the competitiveness of a business. At the same time, though, there is no universal culture that will help all organizations. The same culture is not necessarily found throughout an entire organization. For example, the sales and marketing department may have a culture quite different from that of the operations and manufacturing department. Regardless of its nature, however, culture is a powerful force in organizations, one that can shape the firm's overall effectiveness and long-term success. Companies that can develop and maintain a strong culture tend to be more effective than companies that have trouble developing and maintaining a strong culture. Determinants of Organizational Culture: Typically, organizational culture develops and blossoms over a long period of time. Its starting point is often the organization's founder. As an organization grows, its culture is modified, shaped, and refined by symbols, stories, heroes, slogans, and ceremonies. Corporate success and shared experiences also shape culture. Management of Organizational Culture: Essentially, the manager must understand the current culture and then decide whether it should be maintained or changed. By understanding the organization's current culture, managers can take appropriate actions. Culture can also be maintained by rewarding and promoting people whose behaviors are consistent with the existing culture and by articulating the culture through slogans, ceremonies, and so forth. Managers must walk a fine line, however, between maintaining a culture that still works effectively and changing a culture that has become dysfunctional. Culture problems sometimes arise from mergers or the growth of rival factions within an organization. To change culture, managers must have a clear idea of what they want to create.
