Test Bank

True / False

1. Separating children with disabilities from children without disabilities is the best approach in protecting children with disabilities from bias.

- a. True
- b. False

ANSWER: False

POINTS: 1

DIFFICULTY: Easy

REFERENCES: Developmentally Appropriate Practices

QUESTION TYPE: True / False

HAS VARIABLES: False

LEARNING OBJECTIVES: BEAV.EARL.6.1.2 - Identify developmentally appropriate practice, including child development and learning, individual strengths, interests and needs; and social and cultural contexts.

NATIONAL STANDARDS: United States - DAP 2 - Teaching to Enhance Development and Learning
 United States - DEC C12 - Practices are individualized for each child based on: (a) the child's current behavior and abilities across relevant domains instead of the child's diagnostic classification; (b) the family's views of what the child needs to learn, (c) interventionists' and specialists' views of what the child needs to learn; and (d) the demands, expectations, and requirements of the child's current environments. The practices as well as goals are individualized.
 United States - Head Start - Domain: Physical Health and Development
 United States - INTASC 1 - Learner Development. The teacher understands how learners grow and develop, recognizing that patterns of learning and development vary individually within and across the cognitive, linguistic, social, emotional, and physical areas, and designs and implements developmentally appropriate and challenging learning experiences.
 United States - INTASC 2 - Learning Differences. The teacher uses understanding of individual differences and diverse cultures and communities to ensure inclusive learning environments that enable each learner to meet high standards.
 United States - NAEYC 1a - Knowing and understanding young children's characteristics and needs.
 United States - NAEYC 1b - Knowing and understanding the multiple influences on development and learning.
 United States - NAEYC 1c - Developmental knowledge to create healthy environments for young children
 United States - NAEYC 4b - Knowing and understanding effective strategies and tools for early education, including appropriate uses of technology.
 United States - NAEYC 4c - Using a broad repertoire of developmentally appropriate teaching/learning approaches
 United States - NAEYC 6b - Knowing about and upholding ethical standards and other professional guidelines.

2. Early childhood educators now recognize that a child's cultural background is of little importance in her development and learning.

- a. True
- b. False

ANSWER: False

POINTS: 1

DIFFICULTY: Easy

REFERENCES: Developmentally Appropriate Practices

QUESTION TYPE: True / False

HAS VARIABLES: False

LEARNING OBJECTIVES: BEAV.EARL.6.1.2 - Identify developmentally appropriate practice, including child development and learning, individual strengths, interests and needs; and social and cultural contexts.

NATIONAL STANDARDS: United States - DAP 2 - Teaching to Enhance Development and Learning
United States - DAP 5 - Establishing reciprocal relationships with families
United States - DEC C12 - Practices are individualized for each child based on: (a) the child's current behavior and abilities across relevant domains instead of the child's diagnostic classification; (b) the family's views of what the child needs to learn, (c) interventionists' and specialists' views of what the child needs to learn; and (d) the demands, expectations, and requirements of the child's current environments. The practices as well as goals are individualized.
United States - Head Start - Domain: Physical Health and Development
United States - INTASC 2 - Learning Differences. The teacher uses understanding of individual differences and diverse cultures and communities to ensure inclusive learning environments that enable each learner to meet high standards.
United States - INTASC 7 - Planning for Instruction. The teacher plans instruction that supports every student in meeting rigorous learning goals by drawing upon knowledge of content areas, curriculum, cross-disciplinary skills, and pedagogy, as well as knowledge of learners and the community context.
United States - NAEYC 1a - Knowing and understanding young children's characteristics and needs.
United States - NAEYC 1b - Knowing and understanding the multiple influences on development and learning.
United States - NAEYC 6d - Integrating knowledgeable, reflective, and critical perspectives on early education.

3. Understanding of the intelligences should be linked with a curriculum focused on understanding where children are able to apply what they have learned in new situations.

- a. True
- b. False

ANSWER: True

POINTS: 1

DIFFICULTY: Moderate

REFERENCES: Early Childhood Education

QUESTION TYPE: True / False

HAS VARIABLES: False

LEARNING OBJECTIVES: BEAV.EARL.6.1.1 - Discuss the importance of historical information and theories to the field of early childhood education

NATIONAL STANDARDS: United States - DAP 2 - Teaching to Enhance Development and Learning
United States - DEC C12 - Practices are individualized for each child based on: (a) the child's current behavior and abilities across relevant domains instead of the child's diagnostic classification; (b) the family's views of what the child needs to learn, (c) interventionists' and

specialists' views of what the child needs to learn; and (d) the demands, expectations, and requirements of the child's current environments. The practices as well as goals are individualized.

United States - DEC C15 - Recommended practices are used to teach/ promote whatever skills are necessary for children to function more completely, competently, adaptively, and independently in the child's natural environment. These skills should included teaching those that maximize participation and membership in home, school and community environments— including those that are typical or similar to other persons' in the environment.

United States - Head Start - Domain: Physical Health and Development

United States - INTASC 1 - Learner Development. The teacher understands how learners grow and develop, recognizing that patterns of learning and development vary individually within and across the cognitive, linguistic, social, emotional, and physical areas, and designs and implements developmentally appropriate and challenging learning experiences.

United States - INTASC 2 - Learning Differences. The teacher uses understanding of individual differences and diverse cultures and communities to ensure inclusive learning environments that enable each learner to meet high standards.

United States - NAEYC 1a - Knowing and understanding young children's characteristics and needs.

United States - NAEYC 1b - Knowing and understanding the multiple influences on development and learning.

United States - NAEYC 1c - Developmental knowledge to create healthy environments for young children

United States - NAEYC 4b - Knowing and understanding effective strategies and tools for early education, including appropriate uses of technology.

United States - NAEYC 4c - Using a broad repertoire of developmentally appropriate teaching/learning approaches

United States - NAEYC 5c - Using own knowledge, appropriate early learning standards, and other resources to design, implement, and evaluate developmentally meaningful and challenging curriculum for each child.

29. A **theory** refers to a systematic statement of principles and beliefs created to explain a phenomenon or group of facts that have been repeatedly tested or are widely accepted. "The foundation for all curricula is developmental theory or beliefs about how children develop and learn. These beliefs guide our view of teaching and supporting children as learners" (Catron & Allen, 2008).

With this statement in mind:

- identify at least three theorists and the name of their theories that you learned about in Chapter One;
- describe in detail at least two terms associated with their theories; and
- explain how their theories might influence decision-making in early childhood classrooms.

ANSWER: A. The four theorists discussed in this chapter are Erikson (Psycho-Social Theory), Piaget (Cognitive Development Theory), Vygotsky (Socio-cultural Theory) and Gardner (Multiple Intelligence Theory).

B.

1. Terms associated with Erikson include the 4 stages of psycho-social development that impact early childhood:

- *Trust versus Mistrust* (ages birth to 1)
- *Autonomy versus Shame and Doubt* (second year)
- *Initiative versus Guilt* (3 to 5 years)
- *Industry vs. Inferiority* (6 to 11 years)

2. Terms associated with Piaget include schema, equilibrium, assimilation, accommodation, egocentrism, active exploration and discovery, constructivism, object permanence, and symbolic thinking as well as stages:

- *Sensorimotor stage* (birth to about 2 years)
- *Preoperational stage* (about 2 to 7 years)
- *Concrete Operations stage* (about 7 to 12 years)
- *Formal Operations stage* (12 years through adulthood)

3. Terms associated with Vygotsky include zone of proximal development and scaffolding

4. Terms associated with Howard Gardner's Multiple intelligence theory are:

- *Verbal-Linguistic Intelligence*
- *Logical-Mathematical Intelligence*
- *Musical-Rhythmic Intelligence*
- *Visual-Spatial Intelligence*
- *Bodily-Kinesthetic Intelligence*
- *Interpersonal Intelligence*
- *Intrapersonal Intelligence*
- *Naturalist Intelligence*

C.

1. *Erikson's Psycho-Social Theory*

The stages of development help us understand the importance of allowing children to play out their feelings in an environment of acceptance. Teachers need to have empathy and respect for children.

2. *Piaget's Cognitive Development Theory*

Each of these stages involves a period of formation and a period of attainment. Each builds on the development of the preceding stage. A careful consideration of Piaget's concepts, along with close observation of children, helps teachers provide appropriate environments and experiences, ask appropriate questions, moving from simple to complex and from concrete to abstract.

3. *Vygotsky's Social-Cultural Theory*

For teachers of young children, the zone of proximal development may be used to provide a theoretical base from which to understand cooperative learning. In the culture of the classroom, this can translate into small-group instruction in which students work together to solve problems. In addition, the role of the teacher includes both designing an educative environment and collaborating with children by scaffolding their efforts to master new skills. From this perspective, Vygotsky-based teaching is *activity centered*, since it emphasizes creating opportunities for children to engage in culturally meaningful opportunities with the guidance of teachers and peers.

4. *The Multiple Intelligences Theory*

This theory is a useful model for developing a systematic approach to nurturing and teaching children and honoring their individual needs and strengths within a classroom setting. Teachers need to guide students into using their combination of intelligences to help them learn whatever they want to learn, as well as what teachers and society believe they have to learn. Understanding of the intelligences should be linked with a curriculum focused on understanding where children are able to apply what they have learned in new situations

30. "Teachers have a responsibility to help children develop in their use of play." Defend this statement with information learned from Chapter 1.

ANSWER: Play, particularly in preschool and kindergarten, needs to be an integral part of the educational process. Play is neurological. "Scientific studies of the brain have shown that essential neurological pathways occur in an environment free of stress, fatigue, and anxiety. . . All of the processes involved in play such as repeating actions, making connections, extending skills, combining materials, and taking risks provides the essential electrical impulses to help make connections and interconnections between neural networks thus, extending children's capabilities as learners, thinkers, and communicators" (Miller & Almon, 2009). . Also, we should convey to parents the importance of play in the lives of young children. Play can be a valuable means of gauging a child's developmental progress. In order for play to occur in classrooms teachers need to be sure to do the following:

- Be aware of current research and resources that validate the importance of play.
- Create a positive and safe place for play. Provide open-ended play materials.
- Respect and encourage individual differences in play abilities.
- Have patience with children and give them time to learn new play skills.
- Introduce activities and materials appropriate for each child's age and stage of development.
- Take a sincere interest in learning discoveries.
- Provide a play environment that reflects attitudes and values of the surrounding culture.
- Offer appropriate props from a child's culture that will help him make connections as he plays.

- Make available culturally diverse materials for all the children to enjoy and learn from as they play.
- Encourage cooperation.
- Allow children time without scheduled or *externally focused* activity. This offers an opportunity for children to be *internally focused* so that imagination and creativity can take over.
- Take time to listen to children as they play and to observe how each child plays, what he plays with, who he plays with, and what the child *can* do.
