Test Bank

1. Children's problems must be considered in the context of their ____.
- a. individual nature
 - b. family dynamics
 - c. community/culture
 - d. all of these

ANSWER: d
POINTS: 1
REFERENCES: Introduction
QUESTION TYPE: Multiple Choice
HAS VARIABLES: False
TOPICS: An Integrative Approach
KEYWORDS: Bloom's: Understand
DATE CREATED: 10/24/2017 7:15 AM
DATE MODIFIED: 10/24/2017 7:29 AM

2. Victor is fearful of approaching new situations and often appears inhibited. Victor's mother reports that she struggles with similar difficulties and he may have inherited it from her. This is an example of ____.
- a. emotional influences
 - b. biological influences
 - c. cognitive influences
 - d. behavioral influences

ANSWER: b
POINTS: 1
REFERENCES: What Is Causing Jorge's Problems?
QUESTION TYPE: Multiple Choice
HAS VARIABLES: False
TOPICS: Jorge's Problems
KEYWORDS: Bloom's: Understand
DATE CREATED: 10/24/2017 7:15 AM
DATE MODIFIED: 10/24/2017 7:29 AM

3. Etiology refers to the ____ of childhood disorders.
- possible root causes
 - possible treatments
 - various correlations
 - various preventions

ANSWER: a

POINTS: 1

REFERENCES: Theoretical Foundation

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Theoretical Foundations

KEYWORDS: Bloom's: Understand

DATE CREATED: 10/24/2017 7:15 AM

DATE MODIFIED: 10/24/2017 7:29 AM

4. What is an underlying assumption with regard to abnormal child behavior?
- Abnormal development is solely determined by the child's genetic makeup.
 - Abnormal development is solely determined by the child's environment.
 - Abnormal development involves continuities and discontinuities.
 - Abnormal development focuses on extreme or bizarre behavior.

ANSWER: c

POINTS: 1

REFERENCES: Theoretical Foundation

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Abnormal Development

KEYWORDS: Bloom's: Understand

DATE CREATED: 10/24/2017 7:15 AM

DATE MODIFIED: 10/24/2017 7:29 AM

5. Isabella is 3 years old, and frequently demands attention, overreacts, and refuses to go to bed. These behaviors are considered ____.
- a. typical because of her age
 - b. diagnosable as a clinical disorder
 - c. signs of an overly sensitive child
 - d. early warning signs of future difficulties

ANSWER: a

POINTS: 1

REFERENCES: Theoretical Foundation

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Developmental Overview

KEYWORDS: Bloom's: Apply

DATE CREATED: 10/24/2017 7:15 AM

DATE MODIFIED: 10/24/2017 7:29 AM

6. Brett is an aggressive preschooler, who often bites other children and throws toys at his teacher. When Brett finished 3rd grade, he was asked to find another school to attend since he had repeatedly hit his classmates and kicked the principal. Brett's behavioral patterns are an example of
- a. abnormal behavior that follows a discontinuities pattern.
 - b. abnormal behavior that follows a continuity pattern.
 - c. normal age appropriate development.
 - d. sociopathic behavior that is rare in young children.

ANSWER: b

POINTS: 1

REFERENCES: Theoretical Foundations

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Abnormal Development

KEYWORDS: Bloom's: Understand

DATE CREATED: 10/24/2017 7:15 AM

DATE MODIFIED: 10/24/2017 7:29 AM

7. When developmental psychopathologists view adaptive and maladaptive behaviors as the result of previous interactions and experiences spread over several years, they refer to the process as
- typical development.
 - environmental determinants.
 - developmental cascades.
 - developmental theoretics.

ANSWER: c

POINTS: 1

REFERENCES: Theoretical Foundations

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Developmental Psychopathology Perspective

KEYWORDS: Bloom's: Understand

DATE CREATED: 10/24/2017 7:15 AM

DATE MODIFIED: 10/24/2017 7:29 AM

8. An integrative approach to the psychopathology of a child means that
- maladaptive behaviors are acceptable.
 - all development takes place on a continuum.
 - more than one therapist has to see the child.
 - many theories and concepts can be used to explain behavior.

ANSWER: d

POINTS: 1

REFERENCES: Theoretical Foundations

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Integrative Approach

KEYWORDS: Bloom's: Understand

DATE CREATED: 10/24/2017 7:15 AM

DATE MODIFIED: 10/24/2017 7:29 AM

9. Most often, adaptational failure is due to a(n) ____.
- a. single, definable cause
 - b. longstanding biological maladaptation
 - c. ongoing interaction between the individual and environment
 - d. sudden onset of an environmental challenge

ANSWER: c
POINTS: 1
REFERENCES: Developmental Considerations
QUESTION TYPE: Multiple Choice
HAS VARIABLES: False
TOPICS: Abnormal Development
KEYWORDS: Bloom's: Understand
DATE CREATED: 10/24/2017 7:15 AM
DATE MODIFIED: 10/24/2017 7:29 AM

10. A toddler learning to make sounds such as “mememe” and “bagabaga” before learning how to use intelligible language indicates a structure and process to development, otherwise known as the
- a. organization of development.
 - b. hierarchy of development.
 - c. biological perspective.
 - d. integrative perspective.

ANSWER: c
POINTS: 1
REFERENCES: Developmental Considerations
QUESTION TYPE: Multiple Choice
HAS VARIABLES: False
TOPICS: Organization of Development
KEYWORDS: Bloom's: Apply
DATE CREATED: 10/24/2017 7:15 AM
DATE MODIFIED: 10/24/2017 7:29 AM

11. The windows of time during which environmental influences on development are enhanced are called ____.
- a. sensitive periods
 - b. critical periods
 - c. crucial periods
 - d. necessary periods

ANSWER: a

POINTS: 1

REFERENCES: Developmental Considerations

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Organization of Development

KEYWORDS: Bloom's: Understand

DATE CREATED: 10/24/2017 7:15 AM

DATE MODIFIED: 10/24/2017 7:29 AM

12. ____, The brain develops and grows over a lifetime, but from birth to 11 years, the most dramatic changes occur. Problems or disruptions that occur when a child is young can lead to
- a. disorganized development.
 - b. organic disorders.
 - c. hierarchical development.
 - d. broken synapses.

ANSWER: b

POINTS: 1

REFERENCES: Developmental Considerations

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Biological Perspective

KEYWORDS: Bloom's: Understand

DATE CREATED: 10/24/2017 7:15 AM

DATE MODIFIED: 10/24/2017 7:29 AM

13. Children's development occurs in a(n) ____ manner.
- a. mostly random
 - b. strictly organized
 - c. strictly hierarchical
 - d. organized and hierarchical

ANSWER: d

POINTS: 1

REFERENCES: Developmental consideration

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Organization of Development

KEYWORDS: Bloom's: Understand

DATE CREATED: 10/24/2017 7:15 AM

DATE MODIFIED: 10/24/2017 7:29 AM

14. The developmental psychopathology approach to studying childhood disorders emphasizes the importance of developmental ____.
- a. disruptions
 - b. processes and tasks
 - c. regressions
 - d. obstacles

ANSWER: b

POINTS: 1

REFERENCES: Theoretical Foundations

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Abnormal Developmental

KEYWORDS: Bloom's: Understand

DATE CREATED: 10/24/2017 7:15 AM

DATE MODIFIED: 10/24/2017 7:29 AM

15. The two terms that are used to explain how a child's interaction with his/her environment can lead to the development of maladaptive behaviors are
- organized and interactive
 - interactive and proactive
 - transaction and interdependent
 - transaction and transition

ANSWER: d

POINTS: 1

REFERENCES: Theoretical Foundations

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Abnormal Development

KEYWORDS: Bloom's: Understand

DATE CREATED: 10/24/2017 7:15 AM

DATE MODIFIED: 10/24/2017 7:29 AM

16. The role that a child's primary caretaker has in terms of that child's brain development is crucial, since those early experiences form the part of the brain that is responsible for their__.
- planning and complex processes
 - Problem-solving skills
 - emotion, personality, and behavior
 - Fine and gross motor skills

ANSWER: c

POINTS: 1

REFERENCES: Biological Perspectives

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Organization of Development

KEYWORDS: Bloom's: Understand

DATE CREATED: 10/24/2017 7:15 AM

DATE MODIFIED: 10/24/2017 7:29 AM

17. Brain maturity occurs in a(n) ____ fashion.
- a. mostly random
 - b. strictly organized
 - c. strictly hierarchical
 - d. organized and hierarchical

ANSWER: d

POINTS: 1

REFERENCES: Biological Perspectives

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Organization of Development

KEYWORDS: Bloom's: Understand

DATE CREATED: 10/24/2017 7:15 AM

DATE MODIFIED: 10/24/2017 7:29 AM

18. Which statement about neural development is false?
- a. Most developing axons reach their destination even before a baby is born.
 - b. Synapses both proliferate and disappear in early childhood.
 - c. Brain connections are relatively predetermined and cannot be changed by the environment.
 - d. Primitive areas of the brain develop first.

ANSWER: c

POINTS: 1

REFERENCES: Biological Perspectives

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Neurobiological Contribution

KEYWORDS: Bloom's: Understand

DATE CREATED: 10/24/2017 7:15 AM

DATE MODIFIED: 10/24/2017 7:29 AM

19. Which statement about neural development is true?
- a. Major restructuring of the brain in relation to puberty occurs between 6 and 9 years of age.
 - b. The brain stops developing after 3 years of age.
 - c. Primitive areas of the brain mature last.
 - d. The prefrontal cortex and the cerebellum are not wired until a person is 5 to 7 years old.

ANSWER: d

POINTS: 1

REFERENCES: Biological Perspectives

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Organization of Development

KEYWORDS: Bloom's: Understand

DATE CREATED: 10/24/2017 7:15 AM

DATE MODIFIED: 10/24/2017 7:29 AM

20. Which statement about our genetic makeup is false?
- a. Genes determine behavior.
 - b. Genes are composed of DNA.
 - c. Genes produce proteins.
 - d. The expression of genes is influenced by the environment.

ANSWER: a

POINTS: 1

REFERENCES: Biological Perspective

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Genetic Contributions

KEYWORDS: Bloom's: Understand

DATE CREATED: 10/24/2017 7:15 AM

DATE MODIFIED: 10/24/2017 7:29 AM

21. The problem with family aggregation studies is that they ____.
- a. are difficult to carry out
 - b. do not control for environmental variables
 - c. only tell us about the influence of the environment
 - d. only tell us about chromosomal abnormalities

ANSWER: b

POINTS: 1

REFERENCES: Biological Perspectives

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Genetic Contributions

KEYWORDS: Bloom's: Understand

DATE CREATED: 10/24/2017 7:15 AM

DATE MODIFIED: 10/24/2017 7:29 AM

22. Molecular geneticists focus on finding a specific gene for childhood disorder, while behavioral geneticists ____.
- a. study the possible connection between genetic predisposition and behavior
 - b. study the possible connection between genes and education
 - c. focus on brain development between 3 and 5 years
 - d. focus on neural synapsis developing until age 11

ANSWER: c

POINTS: 1

REFERENCES: Biological Perspective

QUESTION TYPE: Multiple Choice

HAS VARIABLES: False

TOPICS: Genetic Contributions

KEYWORDS: Bloom's: Understand

DATE CREATED: 10/24/2017 7:15 AM

55. Jace is a baby that often seems nervous in new situations and around new people and is not easily comforted by his mother in these situations. Jace most likely has which attachment pattern?
- a. Secure
 - b. Anxious-avoidant
 - c. Anxious-resistant
 - d. Disorganized

ANSWER: c

61. Discuss the three major underlying assumptions regarding abnormal child behavior.

ANSWER: The first underlying assumption is that abnormal child behavior is multiply determined. Thus, we have to look beyond the child's current symptoms and consider developmental pathways and interacting events that, over time, contribute to the expression of a particular disorder. The second assumption extends the influence of multiple causes by stressing how the child and environment are interdependent—how they influence each other. This concept departs from the tradition of viewing the environment as acting on the child to cause changes in development, and instead argues that children also influence their own environment. In simple terms, the concept of interdependence appreciates how nature and nurture work together and are, in fact, interconnected. Few psychological disorders or impairments suddenly emerge without at least some warning signs or connections to earlier developmental issues. This connection is apparent, for example, in early-onset and persistent conduct disorders, with which parents and other adults often see troublesome behaviors at a young age that continue in some form into adolescence and adulthood.

62. Distinguish between continuous and discontinuous patterns of behavior development. Which category would an eating disorder fall? Which category would persistent conduct disorders fall?

ANSWER: Continuity implies that developmental changes are gradual and quantitative (i.e., expressed as amounts that can be measured numerically, such as weight and height changes) and that future behavior patterns can be predicted from earlier patterns. Discontinuity, in contrast, implies that developmental changes are abrupt and qualitative (i.e., expressed as qualities that cannot be measured numerically, such as changes in mood or expression) and that future behavior is poorly predicted by earlier patterns. An eating disorder is discontinuous. Persistent conduct disorder is continuous

63. What is meant by using an integrative approach to understanding factors that influence a child's behavior?

ANSWER: Because no single theoretical orientation can explain various behaviors or disorders, we must be familiar with many theories and conceptual models—each contributes important insights into normal and abnormal development.

65. How can a baby with a difficult temperament influence and be influenced by the environment?

ANSWER: This dimension describes the “difficult child,” who is predominantly negative or intense in mood, not very adaptable, and arrhythmic. Some children with this temperament show distress when faced with novel or challenging situations, and others are prone to general distress or irritability, including when limitations are placed on them.

66. Discuss how children learn from their emotions and the emotional expression of others.

ANSWER: Children have a natural tendency to attend to emotional cues from others, which helps them learn to interpret and regulate their own emotions. They learn, from a very young age, through the emotional expressions of others.

67. How permanent are early neuronal connections?

ANSWER: This question has provoked different theories and agonized many parents who are concerned about their children's early development. For instance, if early brain functions are unlikely to change, this implies that early experiences set the course for lifetime development. Freud's similar contention implied that an individual's core personality is formed from an early age, which sets the pace and boundaries for further personality formation.

68. Discuss the major functions of four major neurotransmitters in the brain and their implicated role in psychopathology.

ANSWER: Benzodiazepine-GABA reduces arousal and moderates emotional responses, such as anger and hostility; it is implicated in anxiety disorder. Dopamine may act as a switch that turns on various brain circuits, allowing other neurotransmitters to inhibit or facilitate emotions or behavior and is implicated in schizophrenia, mood disorders, and attention-deficit/hyperactivity disorder. Norepinephrine facilitates or controls emergency reactions and alarm responses; it plays a role in emotional and behavioral regulation, but is not directly implicated with any specific disorder. Serotonin plays a role in information and motor coordination, and is implicated in regulatory problems, obsessive-compulsive disorder, schizophrenia, and mood disorders.

70. Distinguish between emotion reactivity and emotion regulation.

ANSWER: Emotion reactivity refers to individual differences in the threshold and intensity of emotional experience, which provide clues to an individual's level of distress and sensitivity to the environment. Emotion regulation, on the other hand, involves enhancing, maintaining, or inhibiting emotional arousal, which is usually done for a specific purpose or goal.

71. Briefly describe the three primary dimensions of temperament.

ANSWER: Positive affect and approach. This dimension describes the "easy child," who is generally approachable and adaptive to his or her environment and possesses the ability to regulate basic functions of eating, sleeping, and elimination relatively smoothly.
Fearful or inhibited. This dimension describes the "slow-to-warm-up child," who is cautious in his or her approach to novel or challenging situations. Such children are more variable in self-regulation and adaptability and may show distress or negativity toward some situations.
Negative affect or irritability. This dimension describes the "difficult child," who is predominantly negative or intense in mood, not very adaptable, and arrhythmic. Some children with this temperament show distress when faced with novel or challenging situations, and others are prone to general distress or irritability, including when limitations are placed on them.

72. Provide everyday examples of positive and negative reinforcement, extinction, and punishment.

ANSWER: An example of positive reinforcement would be a mother giving a child a special treat if the child behaved in the store. Negative reinforcement would occur when you get in your car and buckle your seatbelt in order to stop the beeping noise. If I got sick on a certain food and was then conditioned to avoid it because it caused nausea, extinction would occur when I no longer pair the sickness with the food and can eat it again. Positive punishment is an active process—doing something to someone like assigning extra chores.

73. Explain why an integrative approach is important in abnormal psychology.

ANSWER: Each model is restricted in its ability to explain abnormal behavior to the extent that it fails to incorporate important components of other models. Fortunately, such disciplinary boundaries are gradually diminishing as different perspectives take into account important variables derived from other models. Over time, major theories of abnormal child psychology have become compatible with one another. Rather than offering contradictory views, each theory contributes one or more pieces of the puzzle of atypical development. As all the available pieces are assembled, the picture of a particular child or adolescent disorder becomes more and more distinct.

74. Discuss the main principles of a developmental psychopathology perspective.

ANSWER: Developmental psychopathology is an approach to describing and studying disorders of childhood, adolescence, and beyond in a manner that emphasizes the importance of developmental processes and tasks. This approach provides a useful framework for organizing the study of abnormal child psychology around milestones and sequences in physical, cognitive, social–emotional, and educational development. It also uses abnormal development to inform normal development, and vice versa (Cicchetti, 2006; Hinshaw, 2013). Simply stated, developmental psychopathology emphasizes the role of developmental processes, the importance of context, and the influence of multiple and interacting events in shaping adaptive and maladaptive development. We adopt this perspective as an organizing framework to describe the dynamic, multidimensional process leading to normal or abnormal outcomes in development.

75. Why do family systems theorists stress the importance of looking at the whole family as opposed to one individual's difficulties?

ANSWER: This view is in line with our earlier discussion of underlying assumptions about children's abnormal development—relationships, not individual children or teens, are often the crucial focus.
