Solutions

Chapter 2: Becoming a Critical Reader

This chapter, in particular, begs for at least some modest MIYO customization on your part. The “Gallery of Web-Based Texts,” which appears in the first section, is just a small, alphabetically arranged sampling of twenty links to the vast store of free and open materials on the Web. If you’re like most instructors, you have developed your own collection of links over several semesters of teaching. Rather than (or in addition to) posting links on your course management system, consider adding them before or after the first section of this chapter. That way, users of your customized version of this text will be able to access links to additional reading materials without ever leaving the digital environment of the handbook.

There are other compelling reasons for you to consider using this handbook to support an effort to wean yourself and your department from a pricey collection of readings. As college professors, we are increasingly turning to open educational resources to combat the rising cost of textbooks and other proprietary materials. What began mostly as a reaction to textbook costs is quickly becoming a movement that promises to change the dynamics of the instructor-text-student triad. Once we wean ourselves from the “three-channel universe” of the major educational publishing houses, we discover we have far more choices. We can create and curate unique sets of course readings drawn from open texts, from the public domain, and from institutional library databases students have already paid for through their tuition and fees.

As students acculturate themselves to higher education, an important developmental milestone is their achievement of critical distance and independence from received wisdom and pre-packaged texts. Asking our students to participating alongside

us in the ongoing process of building a body of readings can be a powerful way for us to encourage reflection about the contingency of knowledge production. We can model critical thinking by challenging our assumptions about textbooks and considering the implications of the tools and lenses we use in our everyday teaching lives.

Quite intentionally, we did not design this handbook to include proprietary readings, for two main reasons. First, we did not want to pass along permissions costs to student users, when myriad courses' worth of free and open readings could be compiled instead. Second, and perhaps more important, we wanted to encourage professors and students to collaborate in creating and curating a body of readings. In order for our students to develop meaningful, transferable, deep understanding of digital literacy, they must learn to examine texts as they exist in multiple digital contexts, not just as they are packaged to look alike in a print anthology of readings. And in order to encourage students' ownership and investment of energy into reading texts critically and carefully, we must release our hold on the reading content we presume to "cover" in our introductory writing courses.

In the traditional instructor-text-student hierarchy, the instructor is entirely responsible for providing the texts the students will examine. These texts are most often "adopted" (or endorsed) by the instructor and purchased (or accessed, if free and open) by the students, who remain passive consumers until and unless they are asked to find texts of their own to support their writing projects. The rationale for basing any kind of writing course on a body of readings is fraught. Regardless of the particular nature of texts used as course readings (whether they be literature, cultural studies, or a model of a certain genre or mode of writing), they have traditionally been used to shape the

conversation and content of a writing course, often at the expense of student agency. This is one of the reasons why many writing teachers have moved away from a reading-heavy course at the introductory college level. They associate difficult and challenging course readings with a teacher-centric tradition from which student writing is trying to escape. They cast reading in a dichotomy against writing.

At the same time, most writing instructors agree that students must write about *something*, and college is the time to begin interacting with texts at an advanced level. But which texts, and how do we keep them from taking over the course and eclipsing our focus on student writing?

Part of the problem with reading in composition is the current medium through which college students interact with course readings. The traditional composition “reader” is an anachronism, especially when we compare it with how students already consume texts outside of an academic environment, and with how they will be expected to read professionally. A bound, print collection of “all rights reserved” readings freezes a sliver of the universe of texts into a closed, expensive, and finite product.

The use of an anthology of readings in composition reinforces a hierarchy in which the teacher (or the department) ostensibly controls the content of the course through a narrow selection of readings the students are supposed to consume. But some fictions underlie this hierarchy. Too often, the teacher ends up controlled by the content, and the student, already pressed for cash and time, takes a pass on consuming it. The irony here is that readings that go unread don’t actually take over the writing course at all; they instead become a stand-in for course content and genuine student engagement.

Section 1: Browsing the Gallery of Web-Based Texts

As it happens, I am working on a composition reader for Flat World Knowledge that will build on the philosophy I've just outlined in the introduction above. Made up almost entirely of texts in the public domain, texts using Creative Commons licenses, and links to open educational resources (OERs), *Open for Knowledge: Readings for College*, scheduled for release in the spring of 2012, will be designed to serve as a companion text to this handbook. It will be a fully curated collection featuring the apparatus of a traditional reader (introductory headnotes, questions before and after readings, assignment sequences, thematically and rhetorically arranged chapters). But by drawing its content from OERs, Creative Commons, and public domain texts, *Open for Knowledge* will be the first composition reader entirely accessible and free online, or like other Flat World Knowledge books, available for print or download at a fraction of the market cost.

I mention this point not to plug the new project, but rather to give some context for what follows here: two tentative Tables of Contents for *Open for Knowledge*, one arranged by theme, and one arranged by types of discourse. Many, but not all, of the texts featured in this TOC were originally accessed through the Gallery of Web-Based Texts. As with everything else in this Instructor's Manual, I invite you to take what you need and leave the rest, and most of all, to come up with a new collection of your own:

Chapter One: Education

The New National Primer (1840)

<http://pds.lib.harvard.edu/pds/view/14153442>

"America at School" (1894-1915)

The Library of Congress American Memory Project

<http://memory.loc.gov/ammem/awlhtml/awlscho.html>

The First Year Book: Teacher's Edition (1914)

<http://pds.lib.harvard.edu/pds/view/15288459>

“My Pedagogic Creed” (1897)

John Dewey

<http://dewey.pragmatism.org/creed.htm>

“Decennial Census Data on Educational Attainment” (1940-2000)

U.S. Census Bureau

<http://www.census.gov/hhes/socdemo/education/data/census/half-century/files/US.pdf>

“Commencement Address at American University” (Audio) (1963)

John F. Kennedy

<http://www.jfklibrary.org/Asset-Viewer/Archives/JFKWHA-190-002.aspx>

“Student Commencement Speech” (1969)

Hillary D. Rodham

<http://www.wellesley.edu/PublicAffairs/Commencement/1969/053169hillary.html>

“The Wilderness of Your Intuition” (1980)

Alan Alda

“Youth” (1952)

Isaac Asimov

<http://www.gutenberg.org/ebooks/31547>

“Envisioning Technology” (2011)

Michael Zappa

<http://michellzappa.com/map/>

These same readings could be reorganized around types of discourse instead of (or in addition to) theme. Here’s a version using six categories of discourse outlined by the Conference on College Composition and Communication (CCCC) in its 2007 Position Statement on Multiple Uses of Writing:

CCCC Statement on the Multiple Uses of Writing (2007). Retrieved June 6, 2011 from <http://www.ncte.org/cccc/resources/positions/multipleuseswriting>.

- forms of **academic discourse** that document with integrity what is known, while recording principled inquiry into the unknown, including analyses, reports, exploratory essays, essay exams, case studies, summaries, abstracts, and annotations;
- forms of **workplace discourse** that observe established conventions, though never at the expense of failing to convey ideas that enlighten and compel, including memos, proposals, evaluations, oral presentations, lab and progress reports, letters, reviews, instructions, and user manuals;
- forms of **civic discourse** that energize all manner of inclusive deliberation, the ideal product of which is just relations among the citizenry, broadly conceived, including arguments, commentaries, charters and manifestoes, surveys, debates, petitions, and editorials;
- forms of **cross-cultural discourse** that bridge the divides among speakers of various Englishes as well as speakers of other languages, especially collaborative, visual, and

internet-based projects, including websites, wikis, blogs, newsletters, interviews, and profiles.

- forms of **personal discourse** that create and maintain relationships, including a relationship with one's self, as a means to social and emotional well-being, including journals, personal narratives, memoirs, reflections, meditations, conversations, dialogues, and correspondence, all in various media;
- forms of **aesthetic discourse** that encourage the individual imagination to engage with diverse cultural traditions, including poetry, fiction, creative nonfiction, drama, screenplays, and songwriting.

“The Earth is Hiring” (2009)

Paul Hawken

http://www.humanity.org/voices/commencements/speeches/index.php?page=hawken_at_uportland

Of course, I don’t mean to suggest from these TOCs that there’s one exclusive collection of open, public domain, and Creative Commons texts out there. My point is exactly the opposite of that. You can come up with an infinite variety of collections yourself. In fact, because *Open for Knowledge* will be considered a commercial project (even though it will be free online), it will be more restricted about what it will be able to reproduce than you would be, as an individual instructor applying principles of educational fair use. You have access to open educational resources like those from Merlot (<http://www.merlot.org/>), Tufts (<http://ocw.tufts.edu/>), or Wisconsin (<http://www.wisc-online.com/>), and you can direct your students to these sites to explore a variety of subject areas. A site like Edge.org, whose annual question generates hundreds of brief, learned, cogent contributions from writers in all sort of disciplines (<http://edge.org/annual-question>) could fund enough composition classes to fill a career, along with a generous sprinkling of Malcolm Gladwell articles from the *New Yorker* (available in a collection from 1996-present at <http://www.gladwell.com/archive.html>).

Then there’s the strategy of leveraging your library’s online database of millions of texts, access to which your students have already paid for through their tuition. If you’re willing to put in some of the sweat equity involved in loading collections of these texts onto your institution’s password protected course management system, you could create a serviceable course reader. Most online databases have a “permalink” function that allows students to access library holdings directly once they are already signed in to

their course management system, without having to log in separately to the library site.

Ask your library staff about prepackaged collections they may already have produced, or ask them to collaborate on creating such collections with you and your colleagues.

Even better, with more advanced classes, or at a later point in the composition sequence, use the Gallery of Web-Based Texts and the exercises that follow it in the first section of Chapter 2 as a building blocks to generate a major assignment that asks your students, individually or collectively, to become curators of web content. This assignment sequence attempts to recover the important elements of critical, shared reading by shifting the needle of agency in the students' direction, empowering, entitling, and investing them with the responsibility to collect and curate course texts. Of course, it can be tailored to fit whatever specific thematic or generic focus your individual course might have.

Here's how such an assignment might work:

Creating and Curating a Collection of Reading and Writing Assignments for a Future College Composition Course

As a college writing student nearing completion of your second semester of college-level writing, you have already completed your first-semester course. You are in an excellent position to think about how reading connects with writing in college, and also whether the assigned readings you purchase as a college student are worth your time or money. This assignment asks you to apply your expertise and your sense of frugality toward doing something fairly unusual: it asks you to create and curate a collection of free and open Web-based readings for a three-week unit of a future first-semester, first-year college composition course.

You are to determine and describe your collection of recommended "readings," and come up with ideas for how to use them as the basis for major and minor writing assignments you think would be useful for college students to complete in their first semester of college.

You should define the notion of an acceptable "reading" very broadly to include: creative, critical, analytical, persuasive, political, or commercial pieces of

communication; historical or cultural artifacts; materials from specific disciplines; legally accessible popular texts such as films, television shows, music, etc.

I am placing no restrictions on the content you find, provided it can be accessed on the Web by others, free of charge, largely free of ad content (unless of course you choose to make advertising your focus), and preferably free of copyright restrictions on educational fair use. Naturally, you may choose to use anything from the Gallery of Web-Based Texts in Chapter 2, Section 1 in *FWKHW*, but you are also welcome to find materials outside that collection.

You could conclude your project by providing at least one excerpt of the kind of exemplary responses you think students could produce, and you could even discuss how students could use these writing and reading assignments to meet some of the course outcomes that appear on our department's statement of desired outcomes for our first-semester writing course.

Here's a tentative Statement of Purpose (see Chapter 4 in *FWKHW*). You should certainly feel free to tweak this and add to it as your project develops, and include your final version as a Writer's Memo accompanying the project:

Voice: <i>I am writing as...</i>	...a second-semester college composition student.
Audience: <i>I am writing to...</i>	... first-semester college composition instructors.
Message: <i>I am writing about...</i>	... a collection of texts on the Web that I think students would benefit from using as a basis for their writing, and I am writing to demonstrate that a DIY, home-made collection of readings is a viable alternative to a pricey, published collection, and I am writing to prove that students can and should have a hand in determining the readings for their introductory college composition courses.
Tone: <i>The relationship I am establishing with my readers is...</i>	one of mutual respect, tinged with a sense of urgency and an emerging sense of independence from being told what to read and what to write.
Attitude: <i>My attitude toward my message is...</i>	... positive, cost-conscious, semi-revolutionary, empowered, cutting-edge, and determined to prove that my collection of readings is just as valid and challenging and useful as any other a first-year, first-semester student might encounter.
Reception: <i>I want my audience to...</i>	... try out these suggested reading and writing assignments with their future students.

And here's a possible way to organize your work:

Intro	Write this last, but present it first; make it a convincing argument or rationale for the specific collection you've chosen. What does this collection have to offer entering college students? Presumably, you're interested in the collection because you chose it, but will it interest other students?
Section 1	Present the collection itself, providing links and brief annotative

	descriptions; present the items in the collection in the recommended order in which you want the students to read them.
Section 2	Present the minor and major writing assignments you believe would be appropriate for students to complete; minor assignments could include a few prompts for weekly 250-word blogs, and the major assignment could be for a longer essay asking students to do something with the readings.
Section 3	Give a demonstration of an exemplary student performance by providing an excerpt or two of “student” writing.
Conclusion	Discuss how the assignments will help students to meet the objectives of the first-semester college composition course.

Habits of Mind Activated:

- Invitation to think like a teacher, even while writing as a student.
- Reflection about what students learned or didn't learn in their previous composition course, especially from the readings and writing assignments.
- Balance between choosing texts out of self-interest with a concern for whether their specific subject matter will engage the majority of entering college students.
- Understanding of the contingency of canonicity in composition specifically and higher education in general.

Pedagogical Opportunities:

- for collaboration, from the low-stakes writing assignments in Chapter 2 through the major project itself, which lends itself to group work.
- for dissemination and publication of recommendations students make for reading and writing assignments (for example, on a class-wide wiki, there could be a page with links to the best collections produced by students, and that wiki could be made publicly available to other professors, employers, etc.)
- for public speaking, if you require students to present their projects.
- for narrower tailoring depending on the setting of the specific section: Is this course part of a learning community or linked with a course from another discipline? Is this course being taught off-site, perhaps at a high school as part of a dual enrollment program? Is this course being taught through distance education (whether entirely online or through a hybrid schedule)?
- for tailoring a peer evaluation protocol (adapting the Twenty Questions for Peer Review in Chapter 11 of *FWKHW*).

A final note: Before your first use of *FWKHW*, use the MIYO customization feature to add your own sites to the Gallery. In subsequent semesters, continue to add to the Gallery, perhaps drawing on the best suggestions from your students.

Section 2: Understanding How Critical Thinking Works

This section's exercises demonstrate just a few ways to crack open the Gallery of Web-Based Texts in order to apply the four sets of questions (on speaker, audience, statement, and relevance). From the four examples in Exercise 1 to the two additional examples in Exercises 2 and 3, students will be exposed to texts in a variety of discourses (civic, academic, personal, aesthetic, and educational) using a variety of media (audio, video, print, and digital). They'll also get some valuable experience in how to use search terms on different sites.

Section 3: Reading a Text Carefully and Closely

The story of “Roger” and “Rhonda” as two different kinds of readers, followed by the depiction of how different lenses lead to different kinds of readings, should help your students to appreciate the benefit of slowing down their reading, and even re-reading. But rather than just showing them the benefits through the repeated excerpt from the Kennedy inaugural, you should encourage them to do multiple readings of a passage of their choosing from the Gallery (or beyond). The first two exercises at the end of this section zero in on the conventions of one highly specialized kind of genre (the quadrennial inaugural address) in one type of discourse (civic), and the final exercise also resides in the (questionably) civic realm of television journalism, but there's nothing stopping you from refitting any of these exercises to focus on genres and discourse types of your choosing.

Before concluding my discussion of this section, I want to make one final recommendation about a complementary text for this chapter, one of several I'll make in this Instructor's Manual to the revolutionary open textbook project, *Writing Spaces* (<http://writingspaces.org/>):

Bunn, Mike. "How to Read like a Writer." *Writing Spaces, Vol. II (2011)*. *Writing Spaces*. Web.
June 6, 2011.

Like the other pieces in the *Writing Spaces* collections, Bunn's is a peer-reviewed article written for an audience of college-level writing students. All the articles in *Writing Spaces* use a Creative commons license which allows reproduction without permission for non-commercial purposes. In "How to Read like a Writer," Bunn provides some useful examples of how to read texts more closely:

<http://writingspaces.org/sites/default/files/bunn--how-to-read.pdf>. Another good piece from Volume II of *Writing Spaces* is Catherine Savini's "Looking for Trouble (<http://writingspaces.org/sites/default/files/savini--looking-for-trouble.pdf>). Savini gives practical examples and demonstrations on how to complicate a reading of a variety of texts:

Savini, Catherine. "Looking for Trouble." *Writing Spaces, Vol. II (2011)*. *Writing Spaces*. Web.
June 9, 2011.

The Flat World Knowledge Handbook for Writers

Chapter 2

Becoming a Critical Reader

Learning Objectives

- Show how the web can be mined for a wealth of academically useful content
- Introduce the concept of writing essays based on free, web-based texts
- Explore how such texts lend themselves to critical inquiry
- Learn how and why critical thinking works
- Understand the creative and constructive elements of critical thinking
- Add to the list of productive questions that can be asked about texts

Learning Objectives

- Demonstrate how to do a close reading on a selection from the "Gallery of Web-Based Texts"
- Uncover the assumptions and implications of textual statements and understand how biases and preconceptions affect readers and writers
- Show how a close reading of any statement is based on uncovering its assumptions, biases, preconceptions, and implications

Browsing the Gallery of Web-based Texts

- **Course management system:** A web-based learning environment that organizes the work of a course (e.g., Blackboard)
- **Wiki:** An interactive, shared website featuring content that can be edited by many users

Browsing the Gallery of Web-based Texts

- The vast majority of web-based texts are available free of charge
- A significant minority of publicly and privately funded sites are free of advertisement and copyright
- Though web texts are easily accessible, they still need to be documented appropriately when used as part of a writing project
- **Partisanship:** Taking an entirely one-sided point of view about a subject

Understanding How Critical Thinking Works

- **Critical thinking:** The ability to separate fact from opinion, to ask questions, to reflect on one's own role in the process of inquiry and discovery, and to pay close attention to detail
- Critical thinkers
 - Consider multiple sides of an issue before choosing sides
 - Tend to ask questions instead of accepting everything they hear or read
 - Read between the lines instead of reading only at face value
 - Develop a keen sense of how their own minds operate
 - Recognize that much of the information they read and hear is a combination of fact and opinion

Understanding How Critical Thinking Works

- To be successful in college, you will have to learn to differentiate between fact and opinion
 - Facts are pieces of information that you can verify as true
 - Opinions are personal views or beliefs that may have very little grounding in fact
- Opinions are put forth as if they were facts, therefore they can be challenging to recognize as opinions

Understanding How Critical Thinking Works

- Critical thinkers develop a habit of subjecting all textual statements to a whole constellation of questions about the speaker (or writer), the intended audience, the statement itself, and the relevance of it
 - **Audience:** The individual or group being addressed or targeted by a piece of communication

Understanding How Critical Thinking Works

- A reader must be able to identify the assumptions a writer makes and then judge whether or not those assumptions need to be challenged or questioned
- As an active reader, you must acknowledge that both writers and readers make assumptions as they negotiate the meaning of any text
 - **Active reader:** A person who uncovers the biases, preconceptions, assumptions and implications of a text

Understanding How Critical Thinking Works

- As a critical thinker who considers all sides of an issue, you have to identify your personal positions and subject them to scrutiny
- You must examine the assumptions that form the foundation of your writing

Reading a Text Carefully and Closely

- **Assumption:** A belief that underlies a writer's proposition or statement
- **Bias:** A deeply held and ingrained belief that can cloud one's perspective as a writer or reader
- **Preconception:** An idea already held by a writer or reader in advance of making or receiving a textual statement
- **Implication:** What readers can infer from statements a writer makes

Reading a Text Carefully and Closely

- Virtually any statement carries a set of assumptions and implications
- You need to be able to recognize biases and preconceptions in others and in yourself so you can form your ideas and present them responsibly

Key Terms

- Course management system
- Wiki
- Partisanship
- Critical thinking
- Audience
- Active reader
- Assumption
- Bias

Key Terms

- Preconception
- Implication
