Fill In the Blanks

28. Financial information reported to decision makers should not contain ____ misstatements.
material; Easy
29. The two types of misstatements are ____ and ____.
errors and fraud; Easy
30. A misstatement is ____ if its presence would impact a decision made by an interested party.
material; Moderate
31. The two factors that influence the materiality of a misstatement are the ____ and the ____ of the misstatement.
size, cause; Easy

Short Answer Questions

32. Explain the difference between a material and a non-material misstatement.

A misstatement is material if a decision maker would make a different decision if the correct information had been reported. A non-material misstatement will not cause the user to make a different decision than if the correct information had been reported.

Easy

33. Explain how financial accounting is like painting a portrait.

The purpose of a portrait is to capture a person's likeness; the purpose of financial accounting is to capture the likeness of an organization that can help decision makers. Just as portraits are not a perfect copy of a person, financial accounting does not purport to be exact.

Easy

34. Name the two types of misstatements and explain how they differ.

The two types of misstatements are errors and fraud. Errors are made accidentally, while fraud is done intentionally.

Easy

35. Explain why decision makers do not expect financial information to be exact.

Exactness with financial information is rarely possible. Users understand this. As long as no material misstatements exist, users can rely on the financial information to help them make decisions.

Moderate

Section 2

- c; Easy**

Fill In the Blanks

48. _____ is sometimes referred to as the language of business.
Accounting; Easy
49. Almost every Organization faces _____ like lawsuits when presenting financial information.
uncertainties; Easy

Short Answer Questions

50. Explain how accounting is like a language.

Accounting is the language that allows organizations to communicate their financial health and future prospects to decision makers using words and numbers. Like other languages, accounting has a set terminology and structural rules and principles, which allow for effective communication.
Easy

51. Explain how knowledge of the language of accounting will benefit a non-accountant.

Financial accounting conveys information, which helps users make decisions about the financial health of an organization. Those who evaluate loan applications, buy capital stock, grant credit, make employment decisions, and provide investment advice need to speak the language of accounting just as accountants do. The more such individuals know about financial accounting terminology, rules, and principles, the more likely it is that they will arrive at appropriate decisions.

Easy

52. Name three uncertainties faced by businesses trying to present their financial information.

Uncertainties faced by organization are:

- 1) Lawsuits**
- 2) Sales of merchandise on credit**
- 3) Promises to pay employee bonus based on future earnings**

Easy

Section 3

creditors and investors; Easy
77. There continues to be conversation regarding the United States considering switching from U.S. GAAP to _____.
IFRS; Moderate

Short Answer Questions

78. Explain the role of the Financial Accounting Standards Board.

The Financial Accounting Standards Board is an independent body that has been tasked with creating accounting standards for businesses in the United States. It has been in existence since 1973. When an accounting issue arises about which companies need guidance, FASB steps in to study the issues and alternatives. After a period of study, the board might pass new rules or make amendments to previous ones. FASB is methodical in its deliberations and the entire process can take years. Changes to U.S. GAAP are never made without proper consideration.
Moderate

79. Explain the importance of U.S. GAAP to businesses in the United States.

Businesses in the United States must convince outside investors and creditors to invest or loan them money if they wish to operate and grow. Obviously, this entails risk on the part of the investor or creditor. Decision makers must believe that they are using reliable data to make reasonable estimations of future stock prices, cash dividends, and cash flows. Without rules for financial reporting, this analysis would be difficult, if not impossible. U.S. GAAP enables outside parties to obtain the financial information they need to reduce their perceived risk to acceptable levels. It provides rules for financial reporting. If investors and creditors understand these rules, they can analyze a company's financial statements to help them determine whether they should invest in a particular company or not. The U.S. economy would not be what it is today without GAAP.
Moderate

Section 4

True/False Questions

80. An asset is a probable future economic benefit owned or controlled by an organization.

True; Easy

81. Inventory is an example of an asset.

True; Easy

82. Liabilities are amounts contributed by owners.
