Chapter 01: True/False		
Anthropologists cannot be considered the discipline of psychology. a. True b. False ANSWER: False	d developmentalists because the stud	dy of child development lies within
2. A researcher investigating the influer scientific study of child development.a. Trueb. False	nce of social interaction on the deve	lopment of morality is engaged in a
ANSWER: True 3. A researcher investigating the origins study of child development. a. True b. False ANSWER: False	s of public policies related to childre	en's issues is engaged in a scientific
4. The five general developmental perioda. True b. False ANSWER: True	ods are recognized by most of the wo	orld's cultures.
5. The cognitive domain of developmer a. True b. False ANSWER: True	nt refers to the intellectual developm	nent of an individual.
6. Throughout history there has been vea. Trueb. FalseANSWER: False	ery little variation in beliefs about ch	nildren and childhood.
7. William Preyer authored <i>The Origin</i> a. True b. False ANSWER: False	of Species.	
8. Research about individual difference remain stable over time.a. Trueb. False	s include investigations of the exten	t to which individual characteristics

Name:	Class:	Date:
Chapter 01: True/False		
ANSWER: True		
9. Evidence does NOT support the concerta. True b. False ANSWER: False	pt of sensitive periods in development	i.
10. There are five main issues concerning a. Trueb. FalseANSWER: False	g the process of development.	
11. Developmental psychologists are MOa. Trueb. FalseANSWER: False	OST interested in listing stages in deve	lopment.
12. Behaviorist theorists believe that exoga. Trueb. FalseANSWER: True	genous factors most strongly influence	e development.
13. Constructivist theorists believe that goa. Trueb. FalseANSWER: False	enetic factors most strongly influence	development.
14. Sociocultural theorists believe that bica. Trueb. FalseANSWER: False	ology is the most influential factor in o	development.
15. The evolutionary framework asserts to a. True b. False ANSWER: False	hat development is stage-like.	
16. Researchers should aim to be unbiasea. Trueb. FalseANSWER: True	ed in their investigations.	

Name:	Class:	Date:
Chapter 01: True/False		
17. Validity and reliability essenti	ally refer to the same concept.	
a. True		
b. False		
ANSWER: False		
18. If two factors are correlated, it	is certain that they are causally related.	
a. True		
b. False		
ANSWER: False		
19. Cross-sectional research examithey get older.	ines development over time by following t	he same group of individuals as
a. True		
b. False		
ANSWER: False		
20. A benefit of the cohort sequen a. True	tial design is that age-related factors can be	e separated from cohort effects.
b. False		
ANSWER: True		
21. The ethics of research require a. True	developmentalists to be concerned with co	nfidentiality.
b. False		
ANSWER: True		
22. Obtaining informed consent front monetary compensation.	om participants in a research study is only	necessary if they are not receiving
a. True		
b. False		

ANSWER: False

Name:	Class:	Date:

Chapter 01: Multiple Choice

- 1. Itard believed that Victor behaved the way he did because he had:
 - a. been retarded since birth.
 - b. been malnourished from an early age.
 - c. been isolated from society.
 - d. a serious physical illness.

ANSWER: c

- 2. Itard worked with Victor to test what theory?
 - a. The social environment shapes children's development.
 - b. The French monarchy did not adequately educate peasants.
 - c. Victor was retarded since birth.
 - d. Victor suffered from autism.

ANSWER: a

- 3. By studying the wild boy of Aveyron, Itard hoped to learn something about the:
 - a. behavior of the mentally ill.
 - b. causes of mental retardation.
 - c. behavior of animals in their natural habitats.
 - d. role of the environment in shaping development.

ANSWER: d

- 4. Studies of the wild boy of Aveyron suggest that:
 - a. interaction with humans is critical for optimal development.
 - b. critical periods in development do not exist.
 - c. natural experiments should not be used to study development.
 - d. the effects of negative experience can be undone with instruction.

ANSWER: d

- 5. The effect of Itard's work with Victor was that Victor:
 - a. made rapid progress and was later found to be developing normally.
 - b. made rapid progress at first but never learned to speak or interact with others normally.
 - c. never learned to communicate.
 - d. made rapid progress but could not develop affection for other people.

ANSWER: b

- 6. The wild boy of Aveyron:
 - a. eventually learned to speak fluent French.
 - b. displayed strong sexual and aggressive instincts.
 - c. learned to communicate simple needs, but never mastered speech.
 - d. never progressed beyond walking on all fours and making animal-like sounds.

ANSWER: c

Name:	Class:	Date:
-------	--------	-------

Chapter 01: Multiple Choice

- 7. Which of the following is NOT a part of the study of child development?
 - a. physical changes over the lifespan
 - b. intellectual changes over the lifespan
 - c. social changes over the lifespan
 - d. environmental stability through the lifespan

ANSWER: d

- 8. Technological advances have contributed to developmental research in all of the following ways EXCEPT:
 - a. video cameras allow for detailed analyses of human behavior.
 - b. brain imaging provides insight into the neural activity underlying behavior.
 - c. computers enable researchers to apply complex analytic strategies to data.
 - d. social media is used to devise therapies for children who have trouble controlling their anger.

ANSWER: d

- 9. The field of study that focuses on the range of children's physical, intellectual, social, and emotional developments is referred to as:
 - a. ecology.
 - b. the clinical interview.
 - c. ethnography.
 - d. developmental science.

ANSWER: d

- 10. Which of the following correctly describes the sequence of the periods of development?
 - a. prenatal, infancy, middle childhood, adolescence
 - b. adolescence, prenatal, early childhood, infancy
 - c. infancy, early childhood, prenatal, adolescence
 - d. early childhood, middle childhood, adolescence, prenatal

ANSWER: a

- 11. Jamie is fascinated by children's ability to solve more complex problems as they get older. Her interest falls in the domain of:
 - a. physical development.
 - b. cognitive development.
 - c. social development.
 - d. emotional development.

ANSWER: b

- 12. Developmentalists recognize four major domains of development, which are:
 - a. cognitive, physical, moral, and social.
 - b. cognitive, social, physical, and emotional.

Name:	Class:	Date:
Chapter 01: Multiple Choice		
c. moral, social, emotional, and physica	ıl.	
d. social, physical, emotional, and lang	uage.	
ANSWER: b		
13. Which of the following is NOT a doma	in of development?	
a. social		
b. cultural		
c. emotional		
d. cognitive		
ANSWER: b		
14. Child development can be defined as:		
a. a psychological rather than a physica	ll process.	
b. the preprogrammed unfolding of the	• •	
c. the process of physical growth that c		
d. the sequence of physical, intellectual	, social, and emotional changes t	that children undergo.
ANSWER: d		
 Researchers interested in children's cog a. form friendships. 	nitive development would MOS	Γ likely study how children:
b. learn to walk.		
c. learn language.		
d. learn to control their frustration.		
ANSWER: c		
 Families, peers, schools, and communit a. ethnographies 	ies, are of childre	en's development.
b. domains		
c. contexts		
d. descriptions		
ANSWER: c		
17. A major context of children's developm	ent is:	
a. genetics.		
b. health.		
c. families.		
d. age.		
ANSWER: c		

- 18. Which of the following is true of the field of developmental science?
 - a. The biological basis of human development has already been well understood.

Name:	Class:	Date:
-------	--------	-------

Chapter 01: Multiple Choice

- b. Cultural processes are not considered to play a large role in human development.
- c. Intervening to promote children's health and well-being is beyond the scope of developmental scientists' activities.
- d. Interdisciplinary and international efforts combine to contribute to existing knowledge about human development.

ANSWER: d

- 19. Which of the following is not a psychological problem that can result from experiencing traumatic events as a child in a refugee family?
 - a. disrupted parent-child attachment
 - b. schizophrenia
 - c. anxiety or depression
 - d. sleep disturbances

ANSWER: b

- 20. The prevailing view of children prior to the sixteenth century was that children were:
 - a. born in original sin.
 - b. miniature adults.
 - c. rebellious in nature.
 - d. inherently good.

ANSWER: b

- 21. What is the primary way that developmental scientists learn about historical beliefs about childhood?
 - a. by imagining what life was like in earlier times
 - b. by examining books, magazines, art, and other records from earlier times
 - c. by interviewing the elderly about what life was like when they were children
 - d. by exploring children's lives in developing countries

ANSWER: b

- 22. The belief that adultlike capacities, desires, interests, and emotions are present in early childhood is referred to as:
 - a. ethnography.
 - b. developmental science.
 - c. preformationism.
 - d. ecology.

ANSWER: c

- 23. Investigations of historical beliefs about childhood reveal that:
 - a. the ways that people think about childhood have remained consistent over time.
 - b. there have been many views about childhood over time.
 - c. childhood has always been viewed as a distinct period of development.

Name:	Class:	Date:
Chapter 01: Multiple Choice		
d. until modern times, children wer <i>ANSWER</i> : c	re viewed as innately good.	
b. It led scientists to study how thec. It led the majority of scientists to day.	influence the discipline of developments be interested in proving how genetic transforming roles of children influence encourage parents to send their children that growing up on farms played	ic factors drive development. enced their growth. ldren to work for 12 hours each
25. In the wake of the industrial revolute recommended to provide children in the a. academic education.b. physical education.c. technical education.d. moral education. ANSWER: d	· •	l, and 10-hour workdays
c. People came to view children as animals.	~ · · ·	o other animals. vention, would behave like lower
 27. The individual whose writings spure evolution was: a. Itard. b. Darwin. c. Preyer. d. Piaget. ANSWER: b 	red interest in the study of human de	evelopment as part of human
28. One of the first developmentalists t (1841–1897). In his view, careful obserhence, to see how behavioral patterns a a. frequency b. importance c. sequence	rvation was necessary to establish the	

Name:	Class:	Date:
-------	--------	-------

Chapter 01: Multiple Choice

d. goals

ANSWER: c

- 29. James Mark Baldwin (1861–1934) made an important theoretical contribution to developmental science by arguing that, to understand abilities in the adult, one first needs to see how an ability:
 - a. emerges and is transformed across stages of development.
 - b. is shaped by learning experiences.
 - c. is encoded in the genes.
 - d. is determined by cultural expectations.

ANSWER: a

- 30. Alfred Binet developed the first intelligence test to:
 - a. identify schoolchildren who could use special education instruction.
 - b. predict the likelihood that individual children would be productive members of society.
 - c. rank all citizens according to mental worth.
 - d. inform the assignment of duties to army recruits.

ANSWER: a

- 31. Which of the following is NOT a fundamental issue regarding the process of development?
 - a. plasticity
 - b. media and technology
 - c. sources of development
 - d. individual differences

ANSWER: b

- 32. Which of the following statements regarding developmentalists is true?
 - a. They are active in applying their knowledge to promote healthy development.
 - b. They assess developmental status but do not prescribe measures for assisting those in trouble.
 - c. Little has been learned about the behavior of human beings in the last century.
 - d. They have not attempted to explain the developmental processes underpinning age-related changes.

ANSWER: a

- 33. Prior to the twentieth century, developmental science mostly focused on
 - a. exploring basic developmental changes during infancy and childhood.
 - b. developmental delays in childhood.
 - c. intellectual giftedness during infancy and early childhood.
 - d. growth and change across the lifespan.

ANSWER: a

34. Professor Jones is interested in how biology, the environment, and the child's own activities interact to produce development. She is mostly concerned with which central issue of developmental science?

Name:	Class:	Date:
Chapter 01: Multiple Choice		
a. plasticity		
b. media and technology		
c. sources of development		
d. individual differences		
ANSWER: c		
35. Dr. Psychology is conducting research that involves rapid change. He is mostly of a. plasticity	<u> =</u>	-
b. continuity/discontinuity		
c. sources of development		
d. individual differences		
ANSWER: b		
36. Jason is a graduate student who is studevelops the characteristics that make the stable through the lifespan. He is mostly a a. plasticity	m different than everyone else ar	nd how those characteristics remain
b. continuity/discontinuity		
c. sources of development		
d. individual differences		
ANSWER: d		
37. Jane has started walking at the young development?	age of eleven months. What can	be expected regarding her language
a. She will experience a language del		
b. She will learn to ask for objects she	e wants early.	
c. She will likely learn to speak soon		
d. Nothing. There is no connection be	etween gross motor skills and lan	guage development.
ANSWER: c		
38. According to the text, what is the mos a. biology	at powerful source of developmen	nt?
b. environment		
c. development itself		
d. parents		
ANSWER: c		
39. A qualitatively distinct, coherent pattereferred to as a. a developmental stage	ern of behavior that emerges duri	ng the course of development is
b. a sensitive period		

Name:	Class:	Date:
-------	--------	-------

Chapter 01: Multiple Choice

- c. plasticity
- d. continuity

ANSWER: a

- 40. Michael believes that his daughter is smart enough to do well in school without getting much help from her teachers. His view is consistent with the idea of:
 - a. the environment as a driving force of development.
 - b. biology as a driving force of development.
 - c. the plasticity of development.
 - d. the discontinuous nature of development.

ANSWER: b

- 41. Which of the following is one of the central questions of developmental psychology?
 - a. In the first few years of life are children more sensitive to learning language or to developing attachments?
 - b. Why are genetic factors more influential than environmental processes in shaping development?
 - c. Exactly how many stages are there in human development?
 - d. Is development a gradual process of change, or is it punctuated by periods of rapid change?

ANSWER: d

- 42. Sensitive periods are times in an organism's development when:
 - a. a particular experience (or lack of it) has a more pronounced effect on development.
 - b. certain events must occur for development to proceed normally.
 - c. great emotional growth occurs.
 - d. a particular experience has an all-or-nothing effect on development.

ANSWER: a

- 43. Mrs. Phelps has just read in a parenting magazine that if she does not begin reading to her daughter during her daughter's first year of life, Leanne will not learn to read well after beginning school. This parenting advice reflects the influence of which developmental concept?
 - a. sensitive periods
 - b. the biological-maturation framework
 - c. representative sampling
 - d. the constructivist framework

ANSWER: a

- 44. Sensitive periods in development:
 - a. occur in some animals but not in humans.
 - b. are thought to regulate bonding in human infants.
 - c. are times during which particular events must occur for development to proceed normally.
 - d. have been observed in humans during psychological development but not during physical development.

Name:	Class:	Date:
Chapter 01: Multiple Choice		
ANSWER: c		
45. Sensitive periods in development referance a. particular experience has a more problem b. particular events must occur for description of development proceeds at a faster problem d. development slows to a near halt. ANSWER: a	ronounced effect on the organism. evelopment to proceed normally.	
46. Sensitive periods in development refe a. a particular experience has a more b. particular events must occur for de c. development proceeds at a faster p d. development slows to a near halt. ANSWER: a	pronounced effect on the organism evelopment to proceed normally.	m than at other times.
47. The degree to which development is of a. plasticity.b. a sensitive period.c. continuity.d. a developmental stage. ANSWER: a	open to change and intervention is	s called:
48. Which of the following is an example a. the qualitative reorganization of m b. the gradual growth in memory cap c. the shift from babbling to talking d. the stage-like transformations that <i>ANSWER</i> : b	ovement required for learning to vacity	
 49. Qualitatively new patterns of behaviorare often referred to as: a. stages. b. breakthroughs. c. passages. d. differences. ANSWER: a 	r during development, such as the	e change from crawling to walking,
50. Stages of development involve chang	es that are:	

a. slow.b. small.

Name:	Class:	Date:
-------	--------	-------

Chapter 01: Multiple Choice

- c. qualitative.
- d. quantitative.

ANSWER: c

- 51. Discontinuous development is a view that regards development as a:
 - a. process in which new ways of understanding and responding to the world emerge at particular time periods.
 - b. cumulative process of adding on more of the same types of skills that were there to begin with.
 - c. process that is influenced solely by genetic factors.
 - d. process that is influenced solely by environmental factors and culture.

ANSWER: a

- 52. Which of the following supports a stage theory of development?
 - a. Children often appear to be in one stage on one occasion and in a different stage on another.
 - b. Children's thinking is continually changing, with most of these changes occurring gradually.
 - c. The processes by which people learn new behaviors remain the same at all ages.
 - d. As children develop, they proceed in a predictable order through a series of qualitatively different stages.

ANSWER: d

- 53. Supporters of the stage perspective would say that a child has reached a new stage of development when:
 - a. the brain changes according to a biological timetable.
 - b. a gradual change in behavior appears.
 - c. qualitatively new patterns of behavior emerge.
 - d. previously acquired skills are applied to a new problem/situation.

ANSWER: c

- 54. Which of the following is a true statement about individual differences in development?
 - a. They are innate and stable.
 - b. Our nature is the strongest influence on our individual differences.
 - c. Our individual differences are the result of the influence of both nature and nurture.
 - d. Our individual differences are the result of the influence of our environment.

ANSWER: c

- 55. Which of the following summarizes what developmentalists believe about the stability of children's psychological characteristics over time?
 - a. Children's characteristics are never stable over time.
 - b. Children's characteristics are always stable over time because of genetic factors.
 - c. The stability of children's characteristics over time depends both on genetic factors and the stability of children's environment.
 - d. Physical traits, but not psychological traits, remain stable over time.

Name:	Class:	Date:
-------	--------	-------

Chapter 01: Multiple Choice

ANSWER: c

- 56. The function of a theory is to:
 - a. make a specific prediction within a single research study.
 - b. show how research fits into public policy.
 - c. guide the collection and interpretation of evidence.
 - d. avoid debate about scientific issues.

ANSWER: c

- 57. Theories are important for understanding child development because they:
 - a. provide systematic organization of many different observations.
 - b. guarantee agreement among researchers about what they see.
 - c. make it appear that child development experts know everything.
 - d. allow immediate applications to help children.

ANSWER: a

- 58. A theory:
 - a. is a collection of evidence.
 - b. organizes evidence collected in the past, but it does not help in making predictions about the future.
 - c. is a specific statement about an expected relationship among two variables.
 - d. provides a framework for collecting and interpreting evidence.

ANSWER: d

- 59. Which of the following represents a consensus of opinion among modern psychologists about human development?
 - a. Piaget's stage theory is an accurate description of development through adolescence.
 - b. Erikson's description of the challenges faced by individuals over the lifespan are sufficient to understand the process of development.
 - c. No single theoretical framework adequately characterizes all of development.
 - d. The sociocultural approach offers the optimal approach to understanding development.

ANSWER: c

- 60. Which of the following is not a way that theoretical perspectives in developmental science differ?
 - a. the domain of development that is being investigated
 - b. the research methodology being used
 - c. the developmental stage being examined
 - d. the central issues that are addressed

ANSWER: c

- 61. Whose theories emphasize the fundamental role played by the sex drive in human development?
 - a. Freud's

Name:	Class:	Date:
Chapter 01: Multiple Choice		
b. Piaget's		
c. Erikson's		
d. Bandura's		
ANSWER: a		
<u> </u>	_ perspective, unresolved traumatic experie	ences in childhood underlie adult
psychological functioning.		
a. psychodynamic		
b. social learning		
c. constructivist		
d. sociocultural		
ANSWER: a		
63. The method of treatment used ba. modeling.b. behavior modification.	by proponents of a psychodynamic approac	ch is called:
c. psychoanalysis.		
d. assimilation.		
ANSWER: a		
64. Which theorist developed the se a. Freud	eries of psychosexual stages of developmen	nt?
b. Piaget		
c. Erikson		
d. Bandura		
ANSWER: a		
65. According to Freud, which men drives that demand immediate gratia. latency	ital structure of the personality is present a fication?	t birth and consists of biological
b. id		
c. ego		
d. superego		
ANSWER: b		
rational component of the personali biological drives and the constraints a. latency	tal structure of the personality begins to entry that attempts to mediate a practical resons imposed by the outside world?	-
b. id		
c. ego		

Name: Clas	ss: Date:	•
------------	-----------	---

Chapter 01: Multiple Choice

d. superego

ANSWER: c

- 67. Erikson departed from Freud's basic ideas about development by arguing that:
 - a. biological drives motivate all human action.
 - b. social and cultural factors play critical roles in development.
 - c. the developmental process is essentially complete by the end of adolescence.
 - d. development proceeds through a series of stages.

ANSWER: b

- 68. In Erikson's theory, the main challenge of adolescence is:
 - a. establishing positive relationships.
 - b. contributing in meaningful ways to society.
 - c. avoidance of guilt.
 - d. the quest for identity.

ANSWER: d

- 69. Behaviorist theory explains that learning occurs when individuals modify their behaviors as a result of:
 - a. receiving rewards and punishments.
 - b. establishing a sense of personal identity.
 - c. constructing higher levels of knowledge.
 - d. being challenged within their zone of proximal development.

ANSWER: a

- 70. Which of the following psychologists subscribed to a behaviorist framework?
 - a. Jean Piaget
 - b. John Watson
 - c. Arnold Gesell
 - d. Sigmund Freud

ANSWER: b

- 71. According to the Law of Effect, behaviors that:
 - a. require little energy to produce are likely to be repeated.
 - b. develop gradually are likely to be long lasting.
 - c. produce uncomfortable effects are likely to be repeated.
 - d. produce a satisfying effect are likely to be repeated.

ANSWER: d

- 72. A researcher who states that the environment "shapes behavior as a sculptor shapes a lump of clay" would support which theoretical framework?
 - a. constructivist

Name:	Class:	Date:
Chapter 01: Multiple Choice		
b. psychodynamic		
c. behaviorist		
d. sociocultural		
ANSWER: c		
73. Viewing children as individuals when the control of the contro	ho are active constructors of their own	development is a major
contribution of:		
a. Freud.		
b. Piaget.		
c. Erikson.		
d. Bandura.		
ANSWER: b		
74. What assumption did Piaget make	about children's learning?	
a. Children are like sponges and a	bsorb knowledge from the world aroun	nd them.
b. Children actively construct under	erstandings of the world around them.	
c. Children's learning is motivated	by the satisfaction of biological drive	es.
d. Children are most likely to learn	n behaviors that contribute to the survi	ival of the species.
ANSWER: b		
75. The theorist known for his apprecia	ation of the active role that children pl	lay in their own knowledge
a. Freud.		
b. Bandura.		
c. Piaget.		
d. Bronfenbrenner.		
ANSWER: c		
76. According to constructivist views, schemes.	during, children interp	pret experiences in terms of existing
a. accommodation		
b. assimilation		
c. equilibration		
d. the sensorimotor stage		
ANSWER: b		
77. An example of Piaget's concept of	assimilation is an infant who:	
	's hair and uses the same grasping mov	vements to grab a toy.
b. learns that her pacifier does not	provide her with milk.	
c. shares a toy with her father.		
d. bangs blocks together rather tha	n chewing on them.	

Name:	Class:	Date:
Chapter 01: Multiple Choice		
ANSWER: a		
78 occurs when a chi	ld modifies an existing schema to acco	ount for new experiences.
a. Accommodation		-
b. Assimilation		
c. Modeling		
d. Replication		
ANSWER: a		
79. An example of Piaget's concept of	f accommodation is: an infant:	
a. feeling more relaxed when in f	amiliar rather than unfamiliar environr	ments.
b. demonstrating a preference for	classical music.	
c. learning to suck on a rattle diff	erently than she sucks on a pacifier.	
d. making eye contact with her ca	aregiver when she knocks over a toy.	
ANSWER: c		
80. According to Piaget, a general fra is a(n):	mework that provides a model for und	erstanding some aspect of the world
a. schema.		
b. id.		
c. ego.		
d. system.		
ANSWER: a

88. According to Konrad Lorenz, all of the following are signs of "babyness" EXCEPT:

a. round, protruding cheeks.

ANSWER: a

b. large eyes relative to the size of the face.

Name:	Class:	Date:
	0.0.00	

Chapter 01: Multiple Choice

- c. a high, protruding forehead.
- d. a small head relative to the size of the body.

ANSWER: d

- 89. According to Lorenz, features that signal "babyness" evoke caregiving behaviors from:
 - a. adults.
 - b. animals but not from humans.
 - c. adults who already have children.
 - d. females but indifference from males.

ANSWER: a

- 90. Individuals switch from a preference for pictures of adults to a preference for pictures of infants at about what age?
 - a. five
 - b. during puberty
 - c. twenty-one
 - d. seven

ANSWER: b

- 91. The change in preference for pictures of infants over pictures of adults coincides with:
 - a. the 5-to-7 brain shift and resultant improvement in cognitive abilities.
 - b. the physiological changes that make people capable of reproducing.
 - c. the achievement of adult status.
 - d. marriage.

ANSWER: b

- 92. Professor Schmidt studies an interdisciplinary science that examines the biological and evolutionary bases of behavior. What does he study?
 - a. preformationism
 - b. ethnography
 - c. ethology
 - d. developmental science

ANSWER: c

- 93. Social learning theory extends the ideas of behaviorism by:
 - a. proposing that children construct their own understandings of the world around them.
 - b. suggesting that neurological health is a key component in learning.
 - c. identifying the importance of modeling others' behaviors for learning.
 - d. revealing that the challenge of early adulthood is to establish intimate relationships.

ANSWER: a

Name:	_ Class:	Date:
Chapter 01: Multiple Choice		
94. Behavior modification is a strategy suggested by in children. a. psychodynamic		theorists to help address problem behaviors
b. social learning		
c. constructivist		
d. information-processing		
ANSWER: b		

- - a. Children's behaviors serve adaptive functions and were selected over the course of evolution.
 - b. Development can be best explained by considering how various individual components interact and change over time to form coherent structures.
 - c. Development is a process of storing, organizing, retrieving, and manipulating knowledge.
 - d. Examining connections between individuals and their social and cultural worlds is essential to understanding development.

ANSWER: c

- 96. The systems theory approach focuses on:
 - a. how genetic factors contribute to development.
 - b. how cultural context shapes development.
 - c. the "hardware" and "software" of intellectual functioning.
 - d. how complex behaviors result from the interaction of multiple factors.

ANSWER: d

- 97. Which theory addresses how new, complex systems of behavior develop from the interaction of less complex parts?
 - a. information-processing theory
 - b. dynamic systems theory
 - c. social learning theory
 - d. evolutionary theory

ANSWER: b

- 98. According to the ecological systems theory, the system that children inhabit on a daily basis is the:
 - a. microsystem.
 - b. mesosystem.
 - c. exosystem.
 - d. macrosystem.

ANSWER: a

- 99. Dr. Jamison believes that exposure to violence in movies is related to increased risky driving behaviors among adolescents. This is an example of a:
 - a. theory.

Name:	Class:	Date:
Chapter 01: Multiple Choice		
b. hypothesis.		
c. systems perspective.		
d. research study.		
ANSWER: b		
100. What type of research activ	ity would have the primary goal of informin	g social policy?
a. basic research		
b. applied research		
c. action research		
d. exploratory research		
ANSWER: c		
101. A researcher who investiga in:	tes the accuracy of children's testimony in ca	ases of abuse is likely to be engaged
a. basic research.		
b. applied research.		
c. action research.		
d. exploratory research.		
ANSWER: b		
1 0 1	dy father/child interactions and her primary on and analysis. To address this concern, she	
a. replicability		
b. validity		
c. reliability		
d. objectivity		
ANSWER: d		
103. When one scientist using thof:	e same procedure as another scientist obtain	s the same results, it is an example
a. experimentation.		
b. validity.		
c. reliability.		
d. replicability.		
ANSWER: d		

104. A psychologist plans to study the development of "intelligence," and his primary concern is whether he will actually study intelligence rather than another phenomenon, such as "reading fluency." To address this concern, he must ensure:

- a. representative sampling.
- b. validity.

Name:	Class:	Date:
Chapter 01: Multiple Choice		
c. reliability.		
d. replicability.		
ANSWER: b		
becomes when a pacifier is taken	aneously observing the same infant agree of from her, this is an example of:	n their descriptions of how upset she
a. an experiment.		
b. validity.		
c. reliability.		
d. replicability.		
ANSWER: c		
	two or more researchers on the same occaent, we say that the observations are:	nsion or by one researcher on two
b. reliable.		
c. objective.		
d. replicable.		
ANSWER: b		
107. Psychologists want their obs	servations of human behavior to:	
a. be unique from the observ	ations of other psychologists.	
b. support their beliefs about	human development.	
c. be consistent across simila	r conditions.	
d. inform social policy making	ng.	
ANSWER: c		
108. A study has validity if:		
a. the data actually reflect the	e phenomena the researcher is trying to stu	dy.
b. the data are collected in a	laboratory setting.	
c. similar results are obtained	d when the study is repeated.	
d. the researcher was not bias	sed when collecting and analyzing data.	
ANSWER: a		
109. The process in which two ora. hypothesis testing.b. sampling.	more research methods are combined to c	confirm a conclusion is called:

c. experimentation.d. triangulation.

ANSWER: d

Name:	Class:	Date:
-------	--------	-------

Chapter 01: Multiple Choice

- 110. Describing behavior in all of its complexity is an advantage of which research technique?
 - a. self-report
 - b. naturalistic observation
 - c. experiment
 - d. clinical interview

ANSWER: b

- 111. Ethnography is the study of the:
 - a. evolutionary processes underlying development.
 - b. biological processes underlying development.
 - c. meanings of behaviors in light of cultural activities and expectations.
 - d. development of individual patterns of behavior.

ANSWER: c

- 112. Which of the following is an example of naturalistic observation?
 - a. A three-year-old listens to her sister practice a song on the piano, then plays that song on the piano.
 - b. A teacher keeps count of how many children use each piece of playground equipment at recess.
 - c. An experimenter brings children into the laboratory to test their language comprehension.
 - d. A teacher examines children's test scores to see whether they have learned the multiplication tables.

ANSWER: b

- 113. A study in which an investigator compares the behavior of a control group to that of an experimental group is called a(n):
 - a. clinical study.
 - b. correlation study.
 - c. experimental study.
 - d. observational study.

ANSWER: c

- 114. The type of study that compares the behavior of subjects exposed to an environmental change with the behavior of a control group not exposed to the change is:
 - a. an experiment.
 - b. a clinical study.
 - c. a correlational study.
 - d. naturalistic observation.

ANSWER: a

- 115. The only way to determine whether a particular factor causes an event or a behavior is to:
 - a. conduct an experiment.
 - b. observe subjects in a naturalistic setting.
 - c. tailor study techniques to the individual subject.

Name:	Class:	Date:
-------	--------	-------

Chapter 01: Multiple Choice

d. determine if the event is correlated with environmental factors.

ANSWER: a

- 116. When conducting an experiment, researchers usually compare the performance of the experimental group with that of a group that:
 - a. undergoes no experience at all.
 - b. is assigned to a different experimental treatment.
 - c. consists of people who did not volunteer to be in the experimental group.
 - d. is treated like the experimental group except for not receiving the experimental treatment.

ANSWER: d

- 117. In an experiment, the control group:
 - a. prevents autonomy.
 - b. is randomly assigned.
 - c. is a group that checks the experiments to ensure control and validity.
 - d. is similar to the experimental group, but it does not receive the experimental treatment.

ANSWER: d

- 118. The group in an experimental study that is as similar as possible to the experimental group, but does not receive the experimental manipulation, is the:
 - a. control group.
 - b. hypothetical group.
 - c. experimental group.
 - d. observational group.

ANSWER: a

- 119. The greatest strength of the experimental method is its ability to:
 - a. isolate causal factors.
 - b. show relationships between variables.
 - c. uncover the details of subjects' behavior.
 - d. distinguish important from unimportant variables.

ANSWER: a

- 120. One concern of researchers when testing children's reactions in an unfamiliar experimental situation is that:
 - a. it is usually not ethical to experiment with children.
 - b. children do not enjoy participating in experiments.
 - c. children may expect to get rewards and be disappointed when they do not.
 - d. the children may react differently from the way they typically would behave.

ANSWER: d

121. Which type of study tailors questions to the individual subjects?

Name:	Class:	Date:
-------	--------	-------

Chapter 01: Multiple Choice

- a. clinical interview
- b. epidemiological
- c. experimental
- d. observational

ANSWER: a

- 122. Dr. Bergus is conducting a research study where she is asking a client questions that are tailored to them and each question depends on the answer to the question that came before it. This is an example of:
 - a. ecological validity.
 - b. clinical interview.
 - c. experiment.
 - d. naturalistic observation.

ANSWER: b

- 123. Professor Jones finds that in his sample of elementary school children, the taller a child, the higher his or her score on a vocabulary test. The relationship between height and vocabulary is an example of:
 - a. no relationship.
 - b. a causal connection.
 - c. a positive correlation.
 - d. a negative correlation.

ANSWER: c

- 124. When event A and event B are positively correlated:
 - a. either A causes B, or B causes A.
 - b. A causes B.
 - c. we can never be certain if A and B are causally related.
 - d. it is almost certain that they are not causally related.

ANSWER: c

- 125. If an investigator found a +.50 correlation between parents' vocabularies and their children's vocabularies, it would mean that:
 - a. children know about half as many words as their parents.
 - b. the more words parents know, the more words their children know.
 - c. by talking to them, parents increase their children's vocabularies.
 - d. the relationship between parents' and children's vocabularies is too small to be of significance.

ANSWER: b

- 126. A psychology instructor analyzing exam scores notices that the better her students performed on the lecture-based questions, the more poorly they performed on the textbook-based questions. She has discovered:
 - a. a zero correlation between scores on the two parts of the exam.
 - b. a positive correlation between scores on the two parts of the exam.

Name:	Class:	Date:
-------	--------	-------

Chapter 01: Multiple Choice

- c. a negative correlation between scores on the two parts of the exam.
- d. definite evidence that the students who read the textbook do not attend the lectures while those attending them do not read the text.

ANSWER: c

- 127. The overall plan that describes how a study is put together is called the:
 - a. theory.
 - b. hypothesis.
 - c. experiment.
 - d. research design.

ANSWER: d

- 128. If the language development of a single group of children were measured at monthly intervals from the age of six months until their fifth birthday, what type of study would this be?
 - a. longitudinal
 - b. experimental
 - c. cross-sectional
 - d. cohort sequential

ANSWER: a

- 129. Which of the following questions is BEST answered using a longitudinal research design?
 - a. Do toddlers understand gender as well as five-year-olds?
 - b. What is the sequence of a child's concept of gender development?
 - c. At what age do most children fully understand the concept of gender?
 - d. Do adolescents have a greater gender understanding than do elementary school children?

ANSWER: b

- 130. In longitudinal studies, it is sometimes difficult to tell whether changes in behavior are due to development or simply to:
 - a. experimental bias.
 - b. cohort differences.
 - c. experimental manipulation.
 - d. variations in participants' mental health.

ANSWER: b

- 131. Concerns about cohort differences are primarily related to which research designs?
 - a. naturalistic observations and experiments
 - b. microgenetic and experimental
 - c. longitudinal and cross-sectional
 - d. longitudinal and cohort sequential

ANSWER: c

Chapter 01: Multiple Choice		
 132. When psychologists compare separate on a vocabulary test, they are conducting a a. longitudinal study. b. kinship study. c. clinical study. d. cross-sectional study. ANSWER: d		nteen-year-olds, and forty-year-olds
133. Which would be MOST difficult to so a. the sequence of developing memory b. differences in memory strategies us c. differences in the number of words d. the effect of teaching a particular management of the sequence o	y skills in individual subjects ed by subjects of different ages remembered by subjects of diffe	erent ages
 134. Researchers take advantage of the be features using a: a. representative sample. b. biocultural approach. c. cohort sequential design. d. microgenetic design. ANSWER: c 	nefits of cross-sectional and long	gitudinal design by combining their
135. Which is a problem commonly associated a. Subjects are likely to drop out before b. Subjects may become accustomed to c. They require a long-term time commond. Changes that are the result of growing caused by age. ANSWER: d	re the study is over. To the testing procedures being us The mitment by both subjects and res	sed. searchers.
136. A research design in which the longit a. microgenetic design.b. cohort sequential design.c. naturalistic observation.d. experimental design. ANSWER: b	udinal method is replicated with	several cohorts is called a:

137. Focusing on the process of developmental change over short periods is an advantage of which research

a. self-report design

technique?

b. naturalistic observation

Name:	Class:	Date:
Name.	Olass.	Date.

Chapter 01: Multiple Choice

- c. experimental design
- d. microgenetic design

ANSWER: d

- 138. Which of the following is a fundamental ethical concern of developmentalists?
 - a. freedom from harm
 - b. covert observation
 - c. protection against negative feelings
 - d. monetary compensation for participation

ANSWER: a

- 139. Professor Ferguson is a member of a group that is responsible for evaluating and overseeing the ethical soundness of a research proposal. Which group is he a member of?
 - a. research review group
 - b. social research group
 - c. university review board
 - d. institutional review board

ANSWER: d
